To: Administrator Land Quality Division of Environmental Quality.
Mining permit for land for 2M Construction for sand and gravel.

They have already been removing material from site for the last few months. The main problem is that the road is not built correctly to with stand such heavy (double) loads from these trucks.. It is a small two lane road with no shoulders and very close to Mobile Home Park.

Our home sits right up against the road and we have to deal with not only the heavy vibration from the trucks but the pollutions from the dust and gravel coming into our yard and home.

Our home is also a business of Custom Gunsmithing and because of the machines that are precisely measured for milling and lathe work is being compromised due to the vibration and dust from this already running sand and gravel pit.

They do not stop when they come out from the pit they average approximately 25 mph..Or more.... Then returning they use Jake brakes that shakes the windows and ruins the peace of the neighborhood.

This pit was up and running months before this letter arrived. We as neighbors were NEVER consulted about this pit..

- First: fix the road that they are destroying
- Second: slow down no more use of Jake brakes.
- Third: do something about all the dust from the roads.

Fourth: set up a fund for the damages for the property damage from having to Re-level all the homes and replace windows and other damages that may occur.
