Jeff,

As you can see, Matt accepted your updated MP language concerning his question 124. All we have left is the bond calculation, which Doug is waiting for, and the legal stuff with the AG's office. I am also finishing up my AVF determination and should be done by the middle to end of next week. We are drawing to a close of this phase of the permitting process.

Bj,

Yes, the response to Comment MK124 is accepted.

Matt,

Check this text to see if it addresses your comment 124 issues. I highlighted the areas that appear to comply with your request. Ignore the page numbers since I deleted some of the pages for size reasons. Let me know if this suffices. You are the only reviewer left, other than Andrew with the surface use issues. This is, for all intents and purposes, a Round 4 action. Please reply through this email and I will use it as the narrative for the final document package.

BJ,

Below find Matt Kunze comment 124 and our response. Section MP.6.1 has been updated and a reference to section MP.6.1 has been added to section MP.8.

MK124

MP.8 Water Use

5. This section has been revised in this round to remove groundwater wells as a source of water for the mine. As shown in the new Table MP.8-I, surface water rights are now expected to provide 227,000 gpd, or 69 percent of the mine's water use. In the text, please provide further discussion on how and where these surface water rights will be obtained. For example, are these existing surface water rights that the mine already has rights to, and if so where are the rights located? The Mine Plan PHC (Section MP.6.1) also needs revised as this new plan for water use has not been analyzed for any effect on decreasing surface water quantity. (MDK)

Response: Text has been updated as requested (see attached .doc)
