Tanya,

We have been in communication with a firm on West Virginia, CARDNO, to provide our expectations of a subsidence plan for underground mines. They are crafting a permit application for an underground mine in Sheridan County and, since we have no underground mines currently, we need some help in answering there request. What does District II use for subsidence plans in your underground mines? Is there a guideline or do you have anything in print that may help? They want to know how to approach subsidence so that we can asses their permit application from a common perspective.

I would appreciate any help that you or your staff can provide so that we can offer guidance that is based on empirical information and common practice derived from real field conditions.
