

1 CHAPTER 3

2
3 INDUSTRIAL LANDFILL REGULATIONS

4
5
6 **Section 1. In General.**

7
8 (a) This Chapter is promulgated pursuant to the Wyoming Environmental Quality
9 Act, Wyoming Statute (W.S.) § 35-11-503.

10
11 (b) These rules set forth permit application requirements and to establish minimum
12 standards for the location, design, construction, operation, monitoring, closure, and post-closure
13 maintenance of industrial landfills.

14
15 (c) The definitions in W.S. § 35-11-103(a) and (d) and Chapter 1 of these rules apply
16 to this Chapter.

17
18 (i) “Major Amendment” means major change as defined in Chapter 1 Section
19 1(b)(xlvi) of these rules.

20
21 **Section 2. Industrial Landfill Application Requirements.**

22
23 (a) Permit transition: The following rules concerning permit application submittals
24 under Chapter 1 of these rules shall apply.

25
26 (i) Existing industrial landfills that do not have a lifetime permit and intend to
27 continue disposal of industrial solid waste after the effective date of this Chapter, shall submit a
28 permit application under this Chapter no later than twelve months prior to the expiration date of
29 the facility’s existing permit unless an alternate schedule is approved by the Administrator for
30 good cause.

31
32 (ii) Existing industrial landfills that do not have a lifetime permit and intend to
33 cease disposal of all industrial solid waste before obtaining a lifetime permit, shall submit a
34 closure permit application no later than twelve months prior to the expiration date of the
35 facility’s existing permit or the date the facility is anticipated to cease disposal of industrial solid
36 waste, whichever comes first, unless an alternate schedule is approved by the Administrator for
37 good cause.

38
39 (b) Permit application requirements:

40
41 (i) Permit applications for new facilities and renewal permit applications shall
42 contain a completed application form and a written report containing the applicable information
43 in Sections 3 through 18 of this Chapter, and shall meet all applicable standards. Records and
44 supporting documents such as well logs, maps, cross-sections, and monitoring reports shall be
45 supplied as appendices.

47 (ii) All permit application forms shall be completed in accordance with W.S.
48 § 35-11-506 of the Act and signed by the operator, the landowner, and any real property
49 lienholder of public record. Applications submitted by a municipality, state, federal or other
50 public agency, shall be signed by the head of the agency or ranking elected official.
51

52 (iii) Where the applicant for an existing industrial landfill for disposal of solid
53 wastes associated with oil and gas production holds a legal interest of record entitling dominant
54 use of the site surface for purposes related to oil and gas production, but another party or parties
55 share common ownership in the site surface rights and consent from all such surface landowners
56 cannot be obtained as required in (b)(ii) above, the Administrator may approve the application if,
57 in lieu of surface landowner consent, if the Administrator finds:

58
59 (A) The applicant has identified all parties sharing common ownership
60 of record in the site surface rights and has made all reasonable efforts to directly notify each
61 party of the application, obtain their consent for it, and inform them of their right to review by
62 the Environmental Quality Council in the event the Department approves the application without
63 their consent;
64

65 (B) The landfill will be used only for disposal of non-hazardous wastes
66 associated with oil and gas production activities at the site;
67

68 (C) The application and plans demonstrate that the landfill will be
69 closed and reclaimed in a manner that restores the surface to its prior usefulness;
70

71 (D) The applicant has provided a bond in an amount sufficient to serve
72 the purpose specified in W.S. § 35-11-416, where appropriate;
73

74 (E) The applicant has provided an affidavit stating that it will be solely
75 responsible for disposed solid wastes at the landfill and will protect non-consenting surface
76 owners from liability under 42 U.S.C. § 9607 (CERCLA) or other applicable laws.
77

78 (iv) All permit applications shall be prepared under the supervision of a
79 Wyoming licensed professional engineer. All permit application forms shall be stamped, signed,
80 and dated by a Wyoming licensed professional engineer. In addition, all portions of the permit
81 application that require geological services shall be stamped, signed, and dated by a Wyoming
82 licensed professional geologist.
83

84 (c) Permit terms:

85
86 (i) Permits for new industrial landfills will be issued for the operating life of
87 the facility through post-closure.
88

89 (ii) Renewal permits for existing industrial landfills will be issued for the
90 operating life of the facility through post-closure.
91

92 (iii) Closure permits will be issued for a period that includes the time required

93 to complete closure activities and the minimum post-closure period specified at Section 12 of
94 this Chapter. The closure permit will extend until the Administrator finds that the facility has
95 been adequately stabilized and the environmental monitoring or control systems have
96 demonstrated that the facility closure is protective of human health and the environment
97 consistent with the purposes of the Act. If, following receipt of documentation from the operator,
98 the Administrator determines that all closure and post-closure activities have been completed and
99 closure is protective of human health and the environment, the permit shall be terminated as
100 specified in Chapter 1 of these rules.

101
102 (d) Permit amendments:

103
104 (i) All amendments shall comply with the location, design and construction,
105 operating, monitoring, and closure standards of the applicable chapters of these rules. No
106 amendment shall be implemented by the operator without the prior written authorization of the
107 Administrator.

108
109 (ii) The operator shall submit the proposed amendment in a format approved
110 by the Administrator unless an alternative is approved by the Administrator. Permit amendments
111 may be proposed independently or in conjunction with a permit renewal or closure permit
112 application.

113
114 (A) Minor permit amendments will be processed in accordance with
115 Chapter 1, Section 3 of these rules.

116
117 (B) Major permit amendments will be processed in accordance with
118 this section. The application shall include a cover letter describing in detail the amendment
119 sought. The application for amendment shall include revisions to the permit application
120 sufficient to fully describe the proposed amendment including a revised table of contents and
121 replacement text, plates, and drawings that are fully formatted and numbered for insertion into
122 the permit application.

123
124 (I) The Administrator shall review major permit amendment
125 applications for completeness in accordance with W.S. § 35-11-502(e) and (f). After the
126 application is determined complete, the applicant shall give written notice of the application as
127 required in Chapter 1, Section 2(c)(i) of these rules.

128
129 (II) The Administrator shall determine whether a proposed
130 permit amendment complies with applicable standards and is suitable for publication under W.S.
131 § 35-11-502(h). The applicant shall provide written notice of a proposed permit amendment as
132 specified in Chapter 1, Section 2(c)(ii) of these rules.

133
134 (III) The Director shall render a decision on the major permit
135 amendment in accordance with W.S. § 35-11-502(k) and (m).

136
137 (e) Closure permit application requirements: Closure permit applications shall
138 include information to demonstrate compliance with the requirements in Section 12 of this

139 Chapter and include a narrative describing the site operating history including the dates of
140 operation, the disposal methods used, and the types and amounts of solid waste accepted, a final
141 contour map, and information demonstrating compliance with the closure standards in Chapters
142 6, 7, and 8, as applicable.

143
144 **Section 3. General Facility Information.**

145
146 (a) Operator: The name, address, and telephone number of the legal operator of the
147 facility to whom the permit would be issued, and a listing of any administrative order, civil or
148 administrative penalty assessment, bond forfeiture, misdemeanor or felony conviction, or court
149 proceeding, for any violations of any local, state or federal law relating to environmental quality
150 or criminal racketeering, in which the applicant (including any partners in a partnership or
151 executive officers in any corporation, if the applicant is a partnership or corporation) has been or
152 is currently involved.

153
154 (b) Manager: Position title, address and telephone number of the solid waste
155 manager. A description of the solid waste manager training and examination program to be used
156 by the operator to ensure compliance with the requirements of this chapter. The description shall
157 include a specific listing of the training courses, and the required frequency of attendance at each
158 course by the solid waste manager.

159
160 (c) Legal description: Legal description of the property to be used as a disposal
161 facility. The complete legal description shall consist of a plat and legal description, monumented
162 and signed in accordance with Wyoming Statutes by a Wyoming licensed land surveyor.

163
164 (d) Facility narrative: A description of the disposal facility and the planned solid
165 waste disposal activities, including the facility size, area fill, trench fill, special waste areas, and
166 the type, amount, and source of incoming solid waste.

167
168 (e) Surface and mineral ownership: Information describing surface and mineral
169 ownership of the site and surface ownership of all lands within one mile of the facility boundary.

170
171 (f) Service area: The service area and the solid waste type including trade and
172 common names, and quantity ranges of solid waste on a daily, weekly or monthly basis that will
173 be disposed at the facility.

174
175 (g) Capacity: Estimate site capacity in tons or cubic yards of solid waste and site life,
176 including the calculations on which these estimates are based.

177
178 (h) Potential to impact surface and groundwater: An evaluation of the facility's
179 potential to impact surface and groundwater quality, based on the facility design and
180 hydrogeologic characteristics;

181
182 (i) Waste analyses: As requested by the Administrator, including:

183
184 (i) A description of the physical condition of the solid waste;

- 185
186 (ii) Chemical analyses of the total concentrations of solid waste constituents
187 specified by the Administrator;
188
189 (iii) Leachate analyses from the extraction procedure specified by the
190 Administrator;
191
192 (iv) Analysis of hazardous waste characteristics; and
193
194 (v) A description of the sampling and testing protocols to be used in the
195 collection and analysis of solid waste samples. Testing protocols shall be approved by the
196 Administrator and sampling protocols shall allow collection of samples representative of the total
197 solid waste stream, soil, gas, or liquid.

198
199 **Section 4. Location Standards.**

- 200
201 (a) New Facilities: New industrial landfills, regardless of size, shall be located in
202 accordance with the standards of W.S. § 35-11-502(c) and the standards described in this
203 Section.
204
205 (i) Local zoning ordinances: Facility locations shall not conflict with local
206 zoning ordinances or land use plans that have been adopted by a county commission or
207 municipality.
208
209 (ii) Wild and Scenic Rivers Act: Facility locations shall not diminish the
210 scenic, recreational, and fish and wildlife values for any section of river designated for protection
211 under the Wild and Scenic Rivers Act, 16 U.S.C. §§ 1271 et seq., and implementing regulations.
212
213 (iii) National Historic Preservation Act: Facilities shall not be located in areas
214 where they may pose a threat to an irreplaceable historic or archeological site listed pursuant to
215 the National Historic Preservation Act, 16 U.S.C. §§ 470 et seq. and implementing regulations,
216 or to a natural landmark designated by the National Park Service.
217
218 (iv) Endangered Species Act: Facilities shall not be located within a critical
219 habitat of an endangered or threatened species listed pursuant to the Endangered Species Act, 16
220 U.S.C. §§ 1531 et seq., and implementing regulations, where the facility may cause destruction
221 or adverse modification of the critical habitat, may jeopardize the continued existence of
222 endangered or threatened species or contribute to the taking of such species.
223
224 (v) Big game winter range/grouse breeding grounds: Facilities shall not be
225 located within critical winter ranges for big game or breeding grounds for grouse unless the
226 Administrator, after consultation with the Wyoming Game and Fish Department, determines that
227 facility development will not conflict with the conservation of Wyoming's wildlife resources.
228
229 (b) New units, existing units, and lateral expansions shall not be located in violation
230 of the standards below. Any supporting information needed to demonstrate compliance with

231 these standards shall be provided in an appendix to the permit application.

232

233 (i) Floodplains: New landfill units, existing units, new landfill units at
234 existing facilities, and lateral expansions of existing facilities, shall not be located in a 100-year
235 floodplain, unless the operator demonstrates that the facility or unit will not restrict the flow of a
236 100-year flood, reduce the temporary water storage capacity of the floodplain, or result in
237 washout of solid waste.

238

239 (ii) Wetlands: New landfill units, and lateral expansions, shall not be located
240 in wetlands.

241

242 (iii) Fault areas: New units and lateral expansions shall not be located within
243 200 feet (60 meters) of a fault that has had displacement in Holocene time unless the operator
244 demonstrates that an alternative setback distance of less than 200 feet (60 meters) will prevent
245 damage to the structural integrity of the unit and will be protective of human health and the
246 environment.

247

248 (iv) Seismic impact zones: New units and lateral expansions shall not be
249 located in seismic impact zones, unless the owner demonstrates to the Administrator that all
250 containment structures, including liners, leachate collection systems, and surface water control
251 systems, are designed to resist the maximum horizontal acceleration in lithified earth material for
252 the site;

253

254 (v) Unstable areas: New units and lateral expansions shall not be located in an
255 unstable area unless the owner has demonstrated to the Administrator that engineering measures
256 have been incorporated into the facility's, unit's, or area fill's design to ensure that the integrity
257 of the structural components of the facility, unit, or area fill will not be disrupted. The
258 demonstration must consider:

259

260 (A) On-site or local soil conditions that may result in significant
261 differential settling;

262

263 (B) On-site or local geologic or geomorphologic features; and

264

265 (C) On-site or local human-made features or events (both surface and
266 subsurface).

267

268 (c) Facilities regulated under Chapter 6 or 8: Facilities that are also subject to
269 regulation under Chapter 6 or 8 of these rules shall not be located in violation of the standards in
270 Chapter 6 or 8.

271

272 (d) Access roads: The roads leading to industrial landfills shall not be subject to the
273 location standards described in this Section.

274

275 **Section 5. Regional Geology.**

276

277 The permit application shall include a description of any available regional geologic or
278 hydrologic information, including copies of all available well logs for wells located within one
279 mile of the proposed facility. Supporting documentation such as cross-sections, and maps shall
280 be supplied as an appendix to the permit application.

281

282 **Section 6. Site-Specific Geology.**

283

284 (a) Soil types: A description of the soil types according to the Unified Soil
285 Classification System, and the estimated thickness of the unconsolidated soil materials;

286

287 (b) Geologic conditions: Information on the geologic conditions, including structure,
288 bedrock types, estimated thickness and attitude, and fracture patterns;

289

290 (c) Unstable areas: Identification of unstable areas caused by natural features or man-
291 made features or events, and which may result in geologic hazards including, but not limited to,
292 slope failures, landslides, rockfalls, differential and excessive settling or severe erosion;

293

294 (d) Groundwater information: Including the depth to the uppermost groundwater,
295 aquifer thickness and hydrologic properties such as the groundwater flow direction and rate, and
296 the potentiometric surface, the existing quality of background groundwater and groundwater
297 beneath the facility; and

298

299 (e) Supporting documentation: Such as well completion logs, geologic cross-sections,
300 soil boring lithological logs, potentiometric surface maps and soil or groundwater testing data
301 shall be supplied as an appendix to the permit application.

302

303 **Section 7. Design and Construction Standards.**

304

305 (a) Surveyed corners: All facility boundary corners shall be surveyed and marked
306 with permanent survey caps.

307

308 (b) Access roads: Facility access roads shall be constructed to enable use under
309 inclement weather conditions.

310

311 (c) Buffer zones: All facilities shall be designed and constructed with a buffer zone
312 that is a minimum of twenty feet wide within the facility perimeter fence.

313

314 (d) Cover material: Sufficient cover material shall be available to properly operate the
315 facility through the closure period.

316

317 (e) Surface water structures: Surface water structures shall be designed and
318 constructed to:

319

320 (i) Prevent flow onto the active portion of the landfill during the peak
321 discharge from a 25-year storm;

322

323 (ii) Collect and control run-off from the active portion of the landfill from at
324 least the water volume resulting from a 24-hour, 25-year storm;

325
326 (f) Sediment control structures: Sediment control structures shall be designed and
327 constructed in accordance with Chapter 11 of the Water Quality Rules.

328
329 (g) Engineered containment system or performance-based design:

330
331 (i) The Administrator may require either:

332
333 (A) An engineered containment system, including a composite liner,
334 leachate collection system, and final cover with a permeability less than or equal to the
335 permeability of the bottom liner system, in new units and lateral expansions, or

336
337 (B) A performance-based design that complies with the requirements
338 set out in W.S. § 35-11-527 and demonstrates that concentrations of pollutants will not exceed
339 groundwater protection standards at the relevant point of compliance established by the
340 Administrator that is no more than 150 meters (492 feet) from the solid waste management unit
341 boundary on land owned, leased, or otherwise controlled by the owner of the landfill under any
342 of the following conditions:

343
344 (I) When native soils underlying the landfill are sufficiently
345 permeable to allow potential contamination of groundwater through operation of the facility;

346
347 (II) When solid waste types or operation practices create a
348 reasonable potential for contamination of underlying soils or groundwater;

349
350 (III) When site hydrologic conditions create a condition
351 whereby groundwater is not sufficiently protected from contamination; or

352
353 (IV) At any facility which receives greater than 500 tons of
354 industrial solid waste per operating day, on a monthly average. Containment systems at these
355 facilities shall include leachate collection and leak detection systems.

356
357 (h) Engineered containment systems, if required by the Administrator, shall be
358 designed and constructed as specified in Chapter 2, Section 7(g) and (h) of these rules.

359
360 (i) Slope stability for excavations: Trench walls shall not exceed a ratio of 1.5:1
361 (horizontal:vertical) unless a slope stability analysis demonstrates steeper slopes can be safely
362 constructed and maintained. This analysis may be based on site-specific soil stability calculations
363 or Wyoming Occupational Safety and Health Administration regulations for excavations.

364
365 (j) Methane control systems for on-site structures: All structures on the facility will
366 be designed to prevent the accumulation of methane such that the concentration of methane gas
367 in facility structures does not exceed 25% of the lower explosive limit for methane.

368

Section 8. Operating Standards.

(a) Qualified solid waste manager: Each facility shall be managed by a qualified solid waste manager. In the event that a qualified solid waste manager terminates employment for any reason, a new solid waste manager shall be designated within three months of such termination. For any facility that is constructed, operated, and monitored in compliance, the solid waste manager's qualifications shall be presumed to be adequate. For any facility that is not being constructed, operated, or monitored in compliance, the solid waste manager may be required to complete additional training or demonstrate his or her qualifications by written or oral examination. Within six months of assuming responsibility for operating a facility, a qualified solid waste manager shall:

(i) Possess a complete working knowledge of the facility construction, operating and monitoring procedures, as specified in the permit application and the permit letter issued by the Director.

(ii) Successfully complete a training program described in the approved permit application, which shall include training for the identification of polychlorinated biphenyl (PCB) wastes and hazardous waste regulated under Subtitle C of the federal Resource Conservation and Recovery Act and the Wyoming Hazardous Waste Rules.

(iii) Attend any training course required by the Administrator to provide training on changes to state or federal solid waste rules or guidelines. For any such mandatory training course, the Administrator shall provide each operator with a minimum of forty-five days notice prior to the scheduled training course.

(b) Copy of plan: A copy of the operating plan shall be available at the facility when landfill personnel are on-site or at an alternate location approved by the Administrator.

(c) Access restrictions:

(i) The facility shall be fenced in such a manner as to discourage people and livestock from entering the facility and to contain litter within the facility.

(A) Additional fencing may be required to restrict access to reclaimed areas or other areas that may present public health and safety hazards.

(B) If the facility is located on property that already has a restrictive perimeter fence, the requirement for a perimeter fence around the working area may be waived. However, the Administrator may require suitable litter screens or fences.

(ii) If the public has access to the facility:

(A) Access shall be prohibited at any time other than the facility's posted operating hours; and

415 (B) The access road shall be equipped with a gate that shall be locked
416 when the facility is unattended.

417
418 (d) Liquid wastes: Liquid wastes shall not be disposed of, unless the facility has been
419 permitted by the Director to receive such wastes at a separate solid waste management unit for
420 treatment.

421
422 (e) Hazardous wastes:

423
424 (i) No industrial landfill may accept hazardous wastes regulated under 40
425 CFR, Part 261, with the exception of, hazardous waste excluded under 40 CFR Part 261 if
426 specific authorization is granted in writing by the Administrator;

427
428 (ii) The facility operator shall implement a program of random inspections of
429 incoming solid wastes or take other steps to detect and prevent the disposal of regulated
430 hazardous wastes and PCB wastes; and

431
432 (iii) The facility operator shall promptly notify the Administrator if regulated
433 hazardous wastes or PCB wastes are discovered at the facility.

434
435 (f) Waste screening: The application shall include solid waste screening procedures
436 that shall ensure disposal of authorized solid wastes only.

437
438 (g) Posting: Each point of access shall be identified by a sign, which shall be easily
439 readable and maintained in good condition, and that contains at a minimum the following
440 information:

441
442 (i) For facilities not used by the public:

443
444 (A) Identification of the site as a solid waste landfill; and

445
446 (B) Solid wastes that are accepted for disposal at the facility.

447
448 (ii) For facilities used by the public:

449
450 (A) The facility name;

451
452 (B) The name and phone number of the responsible person to contact
453 in the event of emergencies;

454
455 (C) The hours of operation; and

456
457 (D) Solid wastes that are accepted for disposal at the facility.

458
459 (h) Traffic: If the facility is open to the public, signs shall be posted to direct traffic to
460 the proper area for disposal. Public access shall be controlled so that unauthorized vehicular

461 traffic and illegal disposal of solid wastes are prevented. The facility shall use artificial barriers,
462 natural barriers, or both, as appropriate to protect human health and the environment.

463

464 (i) Salvaging: Salvaging shall be conducted in such a manner as not to interfere with
465 normal operations.

466

467 (j) Burning: No open burning of solid waste is allowed, with the exception of clean
468 wood, tree trimmings, and brush with prior approval from the Air Quality Division.

469

470 (k) Fire protection and other emergency protection measures: Facilities shall
471 maintain, at a minimum, an unobstructed ten foot firelane around all active solid waste
472 management units or within the perimeter fence. The landfill personnel shall have access to
473 portable fire extinguishers when on-site. Personnel shall have a communication system with
474 which to alert the local fire department.

475

476 (l) Litter: The operator shall maintain an effective routine litter collection program
477 that shall take place both within the landfill perimeter and off-site. The program shall describe
478 the frequency of litter collection for internal fences, perimeter roads, and off-site areas. The
479 program shall also describe special operating procedures to be used during periods of high wind
480 and provide wind speed and direction data available for the local area.

481

482 (m) Vectors: On-site populations of disease vectors shall be prevented or controlled
483 using techniques appropriate for the protection of human health and the environment.

484

485 (n) Dust and odors: Adequate measures shall be taken to minimize dust and odors,
486 and to prevent the occurrence of any public nuisance.

487

488 (o) Confined working face: The working face shall be confined to the smallest
489 practical area using signs and physical barriers, if necessary. All solid wastes shall be deposited
490 in a manner to limit windblown litter.

491

492 (p) Topsoil: Topsoil from all disturbed areas shall be stripped and stockpiled in an
493 area that will not be disturbed during facility operation. These stockpiles shall be identified by
494 signs and vegetated for stabilization. This topsoil shall be used for site reclamation. Topsoil shall
495 not be removed from the facility without written authorization from the Administrator.

496

497 (q) Routine cover: All facilities are required to cover all solid waste with an approved
498 cover material at least monthly, or more frequently if required by the Administrator.

499

500 (i) Industrial landfills that receive less than twenty cubic yards of solid waste
501 in any calendar month may instead be covered whenever the solid waste on the working face
502 reaches a depth of three feet, so long as the solid waste stream does not include any putrescible
503 waste; and

504

505 (ii) Cover material shall be comprised of no less than six inches of uniformly
506 compacted soil or any alternative material approved by the Administrator to control infiltration,

507 fires, litter, odor, disease vectors, and scavenging.

508

509 (r) Intermediate cover: For any area where solid wastes will not be disposed for a
510 period of 180 days, that area shall be covered with the required six inches of cover material and
511 an additional twelve inches of intermediate cover.

512

513 (s) Phased reclamation: All completed solid waste fill areas shall be promptly
514 reclaimed with final cover, topsoil and revegetation in accordance with the requirements in
515 Section 12 of this Chapter in order to stabilize the landfill surface and reduce the potential for
516 leachate generation.

517

518 (t) Surface water contact: Standing or running water shall not be allowed to come
519 into contact with solid waste. Adequate measures shall be taken to prevent and alleviate ponding
520 of water over filled areas. Surfaces shall be graded to promote lateral surface water run-off.

521

522 (u) Surface water discharges: Facilities shall be operated such that leachate,
523 contaminated groundwater, and surface water run-off from the active portion of the facility is not
524 allowed to enter any surface water, either on-site or off-site, unless authorized by a National
525 Pollutant Discharge Elimination System (NPDES) permit pursuant to the Clean Water Act.

526

527 (v) Groundwater contact: Solid wastes shall not be placed in contact with
528 groundwater.

529

530 (w) Groundwater discharges: Solid waste disposal facilities shall not alter
531 groundwater quality, as determined by groundwater monitoring.

532

533 (x) Leachate management: Leachate shall be contained in leachate management
534 systems and structures approved by the Administrator.

535

536 **Section 9. Monitoring Standards.**

537

538 (a) Collection and management of samples: Groundwater, soil core, vadose zone, and
539 decomposition gas samples shall be collected and managed in accordance with Department
540 guidance or equivalent methods approved by the Administrator.

541

542 (b) Groundwater monitoring:

543

544 (i) Industrial landfills shall comply with the following groundwater
545 monitoring requirements:

546

547 (A) Applicability:

548

549 (I) Once established at a facility or unit, the groundwater
550 monitoring program required under this Section shall be conducted throughout the active life and
551 post-closure care period, unless modified by the Administrator.

552

553 (II) The Administrator may establish an alternate schedule for
554 compliance with any deadline specified in paragraphs (b)(i)(B) through (E) of this Section.
555

556 (III) The Administrator may suspend the groundwater
557 monitoring requirements of this Section if the operator demonstrates that there is no potential for
558 migration of hazardous constituents from the facility or unit to the uppermost aquifer. This
559 demonstration must be made by a qualified scientist or engineer, and must consider:
560

561 (1.) Site-specific field measurements, and information
562 about the specific solid wastes to be disposed at the facility or unit; and
563

564 (2.) Contaminant fate and transport predictions, which
565 maximize contaminant migration and consider impacts on human health and the environment.
566

567 (IV) The groundwater monitoring requirements of this Section
568 do not apply to:
569

570 (1.) Industrial landfills which ceased receiving solid
571 wastes before January 1, 1998;
572

573 (2.) Industrial landfills which do not receive very small
574 quantity generator (VSQG) hazardous wastes; or
575

576 (3.) Industrial landfills which accept less than twenty
577 tons of solid waste per day (annual average) for disposal, have no evidence of existing
578 groundwater contamination, serve communities that have no practicable solid waste management
579 alternatives and are located in an area that receives less than or equal to twenty-five inches of
580 precipitation annually.
581

582 (B) Groundwater monitoring systems:
583

584 (I) A groundwater monitoring system must be installed with a
585 sufficient number of groundwater monitoring wells to monitor water from the uppermost aquifer
586 that may be affected by leakage from the facility. The system must be capable of monitoring the
587 background water quality and groundwater passing the relevant point of compliance pursuant to
588 Section 7(g) of this Chapter. Groundwater monitoring well locations must be approved by the
589 Administrator, and downgradient groundwater monitoring wells shall be placed in locations
590 within 150 meters (492 feet) of the solid waste management unit boundary on land owned,
591 leased, or otherwise controlled by the operator.
592

593 (II) The Administrator may approve a groundwater monitoring
594 system designed to monitor groundwater from the facility, in lieu of individual solid waste
595 disposal units, if the system is determined to be capable of adequately detecting groundwater
596 pollution. In approving a facility-wide groundwater monitoring system, the Administrator shall
597 consider:
598

- 599
600 solid waste units at the facility;
601
602
603
604
605
606
607 waste units.
- (1.) Number, spacing, and orientation of the individual
 - (2.) Hydrologic setting;
 - (3.) Site history and design; and
 - (4.) Type of solid waste accepted at the individual solid

608
609 (III) The design of the groundwater monitoring system must be
610 based on site-specific information on aquifer thickness, aquifer properties, groundwater flow
611 direction and rate (including seasonal variations), soil information, and any aquitards,
612 aquicludes, or confining formations at the site. The design of the system must be approved by the
613 Administrator.

614
615 (C) Groundwater sampling and analysis shall meet the requirements of
616 Chapter 2, Section 9(b)(i)(C)(I) through (VII).

617
618 (D) Detection monitoring:

619
620 (I) Each facility shall institute a detection monitoring program
621 by sampling each groundwater monitoring well at least semiannually and testing each sample for
622 the constituents specified in Appendix A, unless the Administrator:

623
624 (1.) Deletes a constituent because the operator shows
625 that it is not likely to be present in the solid waste disposed at the facility;

626
627 (2.) Establishes an alternate list of inorganic indicator
628 parameters in lieu of some or all of the heavy metals, if the alternative parameters provide a
629 reliable indication of inorganic releases from the facility or unit, considering the following
630 factors:

631
632 a. The types, quantities, and concentrations of
633 constituents in solid wastes managed at the facility or unit;

634
635 b. The mobility, stability, and persistence of
636 solid waste constituents or their reaction products in the groundwater;

637
638 c. The detectability of indicator parameters,
639 solid waste constituents, and reaction products in the groundwater; and

640
641 d. The concentration or values and coefficients
642 of variation of monitoring parameters or constituents in the groundwater background; or

643
644 (3.) Determines that a different, but no less frequent

645 than annual, monitoring schedule is appropriate, considering the following factors:

646

647 a. Lithology of the aquifer and unsaturated

648 zone;

649

650 b. Hydraulic conductivity of the aquifer and

651 unsaturated zone;

652

653 c. Groundwater flow rates;

654

655 d. Minimum distance between the edge of the

656 solid waste boundary at the facility or unit and the downgradient groundwater monitoring

657 well(s); and

658

659 e. The classification of the aquifer under

660 Chapter 8 of the Water Quality Rules.

661

662 (II) A minimum of four individual samples must be collected
663 and analyzed from each groundwater monitoring well (background and downgradient) during the
664 first year of sampling. At least one sample must be collected and analyzed from each
665 groundwater monitoring well during subsequent sampling events.

666

667 (III) If a statistically significant difference in water quality
668 between background and any groundwater monitoring well at the relevant point of compliance is
669 detected, the operator must:

670

671 (1.) Notify the Administrator in a written report with
672 supporting documentation and place a copy of the report in the facility operating record within
673 fourteen days and start assessment monitoring within ninety days; or

674

675 (2.) Demonstrate to the Administrator that the
676 statistically significant increase over background is not due to the solid waste disposal facility or
677 unit, but that the difference is due to another source of pollution, error in sampling, analysis or
678 statistical evaluation, or natural variation in groundwater quality. The operator shall prepare a
679 report documenting this demonstration and, following approval by the Administrator, place the
680 report in the operating record for the facility. If the report is approved, the operator shall continue
681 detection monitoring. If, after ninety days, a successful demonstration is not made, the operator
682 must initiate an assessment monitoring program.

683

684 (E) Assessment monitoring:

685

686 (I) Assessment monitoring is required whenever a statistically
687 significant increase over background water quality has been detected, subject to the exception in
688 paragraph (b)(i)(D)(III)(2.) of this Section.

689

690 (II) Within ninety days of triggering an assessment monitoring

691 requirement, and annually thereafter, the operator must sample and analyze all downgradient
 692 groundwater monitoring wells for all Appendix B constituents. A minimum of one sample from
 693 each downgradient groundwater monitoring well must be collected during each annual sampling
 694 event. If any Appendix B constituent is detected for the first time in any downgradient
 695 groundwater monitoring well, the owner or operator must promptly collect a minimum of four
 696 additional independent samples from each background and downgradient well. These samples
 697 must be analyzed for each Appendix B constituent which was detected in the initial assessment
 698 monitoring sampling event.

699
 700 (III) The Administrator may specify an appropriate subset of
 701 groundwater monitoring wells to be sampled and analyzed during assessment monitoring, and
 702 may delete Appendix B constituents from the monitoring requirements if it can be shown that the
 703 deleted constituents are not reasonably expected to be contained in or derived from the solid
 704 waste contained in the facility or unit. The Administrator may also specify an appropriate
 705 alternate frequency for the collection of the additional independent samples considering the
 706 following factors:

- 707
 708 (1.) Lithology of the aquifer and unsaturated zone;
 709
 710 (2.) Hydraulic conductivity of the aquifer and
 711 unsaturated zone;
 712
 713 (3.) Groundwater flow rates;
 714
 715 (4.) Minimum distance between the facility and the
 716 downgradient groundwater monitoring well(s);
 717
 718 (5.) Classification of the aquifer under Chapter 8 of the
 719 Water Quality Rules; and
 720
 721 (6.) Nature (fate and transport) of any constituents
 722 detected under assessment monitoring.

723
 724 (IV) After obtaining the results from any assessment monitoring
 725 sampling event, the operator must:

- 726
 727 (1.) Within fourteen days, notify the Administrator in a
 728 written report and place a copy of the report in the operating record identifying the Appendix B
 729 constituents that have been detected;
 730
 731 (2.) Within ninety days, and on at least a semiannual
 732 basis thereafter, resample all groundwater monitoring wells, conduct analyses for all constituents
 733 required under detection monitoring of this Section, and for all Appendix B constituents that
 734 have been detected under assessment monitoring, and record their concentrations in the operating
 735 record. At least one must be collected from each groundwater monitoring well during each
 736 sampling event under this paragraph. The Administrator may approve an alternate sampling

737 frequency, no less than annual, considering the factors in paragraph (b)(i)(E)(III) of this Section;

738

739 (3.) Establish background concentrations for any

740 constituents detected for the first time; and

741

742 (4.) Request in writing that the Administrator establish

743 groundwater protection standards for all constituents detected.

744

745 (V) Within thirty days after completing sampling and analysis,

746 unless an alternate time-frame is approved by the Administrator, the operator must determine

747 whether there has been a statistically significant increase over established groundwater

748 protection standards at each groundwater monitoring well specified by the Administrator.

749

750 (VI) If the concentrations of all Appendix B constituents are at

751 or below background values for two consecutive sampling events, the operator must notify the

752 Administrator and may return to detection monitoring under this Section.

753

754 (VII) If the concentrations of any Appendix B constituents are

755 above background values, but all concentrations are below the groundwater protection standard,

756 using the approved statistical procedures, the operator must continue assessment monitoring.

757

758 (VIII) If one or more Appendix B constituents are detected at

759 statistically significant levels above the groundwater protection standard in any sampling event,

760 the operator must, within fourteen days of this finding, notify the Administrator of the

761 constituents detected above the groundwater protection standard in a written report with

762 supporting documentation and place a copy of the report in the operating record. The operator

763 must notify all local government officials in writing, as determined by the Administrator, and:

764

765 (1.) Characterize the nature and extent of the release by

766 installing additional groundwater monitoring wells as necessary;

767

768 (2.) Install at least one additional groundwater

769 monitoring well at the facility boundary downgradient of the release and sample the groundwater

770 monitoring well in accordance with paragraph (b)(i)(E)(IV)(2.) of this Section;

771

772 (3.) Notify all persons who own or reside on the land

773 that directly overlies any part of a plume of contamination that migrated off-site; and

774

775 (4.) Initiate an assessment of corrective measures within

776 ninety days; or

777

778 (5.) Demonstrate to the Administrator in writing that the

779 contamination was caused by another source or resulted from an error in sampling, analysis or

780 statistical evaluation, or from natural variation in groundwater quality. The operator shall prepare

781 a report documenting this demonstration, and following approval by the Administrator, place the

782 report in the operating record. If a successful demonstration is made, the operator must continue

783 monitoring under the assessment monitoring program, or may return to detection monitoring if
784 all Appendix B constituents are at or below background. Until a successful demonstration is
785 made, the operator must comply with paragraph (b)(i)(E)(VIII) of this Section including
786 initiating an assessment of corrective measures under Section 13 of this Chapter.

787
788 (IX) The operator must request in writing that the Administrator
789 establish a groundwater protection standard for each Appendix B constituent detected in the
790 groundwater. The Administrator shall establish groundwater protection standards for such
791 constituents, which shall be:

792
793 (1.) For constituents where a maximum contaminant
794 level (MCL) has been promulgated, the MCL for that constituent;

795
796 (2.) For constituents for which MCLs have not been
797 promulgated, the background concentration; or

798
799 (3.) For constituents for which the background level is
800 higher than the MCL or health-based level established under subsection (b)(i)(E)(X), the
801 background concentration.

802
803 (X) The administrator may establish an alternative groundwater
804 protection standard for constituents for which MCLs have not been established. These
805 groundwater protection standards shall be health-based levels. For constituents where a MCL
806 does not exist, the alternative groundwater protection standard shall be the more stringent
807 standard meeting the requirements of Water Quality Rules, Chapter 8, Table 1 based on
808 groundwater class of use or the Drinking Water Equivalent Level as determined by the
809 procedures found in the Storage Tank Rules Chapter 1, Section 39(e).

810
811 (ii) Industrial landfills excluded from groundwater monitoring requirements
812 under paragraph (b)(i)(A)(IV) of this Section, shall, if required by the Administrator, comply
813 with the following groundwater monitoring and corrective action requirements:

814
815 (A) Groundwater monitoring well placement: All facilities required to
816 install groundwater monitoring wells shall place them in locations approved by the
817 Administrator. Following initial placement of the groundwater monitoring wells, the operator
818 shall confirm that the groundwater monitoring wells are capable of measuring groundwater
819 quality that is representative of conditions hydraulically upgradient and downgradient of the
820 solid waste disposal facility.

821
822 (B) Groundwater monitoring well design, construction/installation and
823 abandonment: All groundwater monitoring wells shall be designed, constructed and installed in
824 accordance with the Water Quality Rules Chapter 26 requirements. All abandoned groundwater
825 monitoring wells shall be plugged and sealed in accordance with the Water Quality Rules
826 Chapter 26 requirements.

827
828 (C) Permits required: Prior to groundwater monitoring well

829 installation, the groundwater monitoring well design, construction and location specifications
830 shall be approved by the Administrator.

831

832 (D) Analyses:

833

834 (I) Baseline monitoring: The initial groundwater samples shall
835 be analyzed for pH, Total Dissolved Solids (TDS), Chemical Oxygen Demand (COD), Total
836 Organic Carbon (TOC), Ammonia as N, Nitrate as N, Bicarbonate, Carbonate, Chloride,
837 Fluoride, Calcium, Magnesium, Potassium, Sodium, Sulfate, Copper, Iron, Manganese, Nickel,
838 Zinc, Arsenic, Barium, Cadmium, Chromium, Cyanide, Lead, Mercury, Selenium, and Silver.
839 Additionally, water temperature, specific conductance, pH and static water level shall be
840 measured in the field during each baseline monitoring event. The length of this baseline
841 monitoring period shall not exceed one year, and samples shall be obtained at least quarterly
842 during this period.

843

844 (II) Detection monitoring: Following the initial baseline
845 monitoring period, the Administrator may specify a reduced set of sampling parameters to be
846 analyzed at least semi-annually. The reduced set of parameters shall include, at a minimum:
847 pH, temperature, static water level, Total Dissolved Solids (TDS), Chlorides, Ammonia (as N),
848 Iron, Hardness, and Total Organic Carbon (TOC). Additionally, water temperature, specific
849 conductance, pH, and static water level shall be measured in the field during each semi-annual
850 monitoring event.

851

852 (III) Assessment monitoring: Should groundwater monitoring
853 data cause the Administrator to determine the facility may be impacting groundwater quality,
854 additional groundwater monitoring wells, a revised set of sampling parameters, and a revised
855 sampling schedule may be required by the Administrator to define the nature and extent of
856 contamination.

857

858 (IV) The Administrator may specify alternative or additional
859 water quality parameters for analyses, including organic chemical constituents, based on the
860 Administrator's review of the solid wastes likely to be disposed at any specific solid waste
861 disposal facility.

862

863 (E) Corrective actions: Whenever there is a release of contamination
864 which adversely impacts groundwater quality, the operator shall institute corrective actions
865 approved by the Administrator, as specified in Section 13 of this Chapter.

866

867 (iii) Operators of industrial landfills that are subject to the groundwater
868 monitoring requirements shall submit groundwater monitoring data electronically in a format
869 specified by the Administrator.

870

871 (c) Methane:

872

873 (i) Facilities shall be operated such that the concentration of methane at the
874 facility boundary does not exceed the LEL for methane and in facility structures does not exceed

875 25% of the LEL. If methane levels exceed these limits, the operator must:

876

877 (A) Immediately notify the Administrator and take steps to protect
878 human health;

879

880 (B) Within seven days of detection, place a copy of the methane test
881 data and a written description of the steps taken to protect human health in the operating record;
882 and

883

884 (C) Within sixty days of detection, implement a remediation plan that
885 has been approved by the Administrator, and place a copy of that plan in the operating record.

886

887 (ii) The Administrator may establish alternative schedules for demonstrating
888 compliance with the requirements of paragraphs (c)(i)(B) and (C) of this Section.

889

890 (iii) Methane probe system design: Methane probe design, construction,
891 installation, and location shall be adequate to monitor compliance.

892

893 (iv) Abandonment of methane probe boreholes: Abandoned methane probe
894 boreholes shall be plugged and sealed in accordance with Department recommendations.

895

896 (v) Analyses: Methane analyses shall be conducted at least quarterly, if
897 required, using equipment capable of monitoring LEL and percent volume methane and
898 following the manufacturer's recommended procedures.

899

900 (d) Air monitoring: Air monitoring, if required, shall be conducted in accordance
901 with the Air Quality Rules.

902

903 (e) Soil core monitoring: Soil core monitoring, if required, shall be conducted in
904 accordance with a plan approved by the Administrator.

905

906 (f) Vadose zone monitoring: Vadose zone monitoring, if required, shall be conducted
907 in accordance with a plan approved by the Administrator.

908

909 **Section 10. Recordkeeping.**

910

911 (a) Three-year recordkeeping: The following records shall be maintained at the
912 facility or an approved alternative location and available for inspection and copying for a
913 minimum of three years from the date of recording:

914

915 (i) Log of litter collection activities specifying the dates and areas of litter
916 collection;

917

918 (ii) Types and disposition of special wastes, specifying the volume, date of
919 disposition, and source of special waste;

920

- 921 (iii) Records of solid waste sold or otherwise salvaged; and
922
923 (iv) Record of any problems causing operations to cease, including but not
924 limited to fire or equipment failure.
925
926 (b) Long-term recordkeeping: The following records shall be maintained at the
927 facility or an approved alternative location and available for inspection and copying through the
928 end of the post-closure period:
929
930 (i) Any permit application prepared under this Chapter;
931
932 (ii) If not contained in the permit application, any location restriction
933 demonstration that is required;
934
935 (iii) Log of random inspections or other screening activities for regulated
936 hazardous wastes and PCB wastes specifying the date, time, and name(s) of the inspection
937 personnel and any notifications to the Administrator;
938
939 (iv) Records of training of landfill operators to detect hazardous wastes and
940 PCB wastes;
941
942 (v) Monitoring results and any notification or remediation plans;
943
944 (vi) As-built specifications for disposal units, including liners, caps, and
945 leachate collection systems, with their dates of construction, location, length, width and depth;
946
947 (vii) Dates when trenches and units are completed, and their contents;
948
949 (viii) Closure and post-closure plans, if not already contained in the permit
950 application, and any monitoring, testing, or analytical data required in the plans;
951
952 (ix) Any cost estimates and financial assurance documentation;
953
954 (x) Any performance based design demonstration;
955
956 (xi) Dates when reclamation activities took place including a description of the
957 areas reclaimed; and
958
959 (xii) Copies of written correspondence with the Department.
960

961 **Section 11. Reporting Standards.**
962

- 963 (a) Annual reports: Annual reports for the previous calendar year shall be submitted,
964 by March 1, in a format approved by the Administrator, unless an alternate date is approved by
965 the Administrator. Annual reports shall include:
966

967 (i) A summary description of facility operations and activities carried out
968 during the last year including, but not limited to, the construction of new solid waste disposal
969 units, the tons of solid waste received (estimated if the facility has no scales), and the cubic yards
970 of estimated air space used; and

971
972 (ii) A description of any final cover and reclamation activities completed and
973 evaluation of revegetation results during the last year with supporting documentation that
974 reclamation was completed in accordance with the Solid Waste Rules and the facility permit.

975
976 (iii) Environmental monitoring data: On an annual basis, operators shall
977 provide the Administrator with electronic copies of all required environmental monitoring data
978 not previously submitted, in a format specified by the Administrator.

979
980 (b) Additional information: The Administrator may require reporting of additional
981 information needed to demonstrate compliance with these rules.

982
983 **Section 12. Closure and Post-Closure Standards.**

984
985 (a) Commencement of closure: Approved closure activities shall commence no later
986 than thirty days after the facility stops receiving solid wastes and shall be completed within
987 twelve months following commencement of closure activities. The Administrator may approve:

988
989 (i) Delayed closure of a facility or unit if the facility or unit has additional
990 remaining disposal capacity, and the owner demonstrates that there will be no threats to human
991 health or the environment from the unclosed facility or unit; and

992
993 (ii) Extensions of the closure period if needed to adequately complete closure
994 activities and the owner demonstrates that there will be no threats to human health or the
995 environment from the unclosed facility or unit.

996
997 (b) Notification and certification of facility and unit closure: Prior to the
998 commencement of unit and facility closure activities, the operator shall notify the Administrator
999 in writing and place a notice of closure in the operating record. Within ninety days following
1000 closure of each unit and facility, the operator shall submit a certification with supporting
1001 documentation signed by a Wyoming registered professional engineer that closure has been
1002 completed in accordance with the approved closure plan and place a copy of the certification in
1003 the facility operating record.

1004
1005 (c) Notice on deed: At facility closure, an instrument that clearly gives notice of the
1006 restrictions that apply to future activities on the disposal facility property shall be filed for
1007 recording by the registrar of deeds (county clerk) in the county where the facility is located. The
1008 wording of such an instrument shall indicate that the property has been used as a solid waste
1009 disposal facility. This shall be recorded prior to any property transaction resulting in another use
1010 for the property. The owner or operator, and its successors, shall ensure that post-closure use of
1011 the property is restricted to prevent any disturbance to the facility's containment system including
1012 caps and liners, or the functioning of the facility's monitoring system. The owner or operator may

1013 request permission from the Administrator to remove the notation from the deed if all solid
1014 wastes are removed from the facility.

1015
1016 (d) Erosion and ponding problems: Facilities shall be engineered to inhibit future
1017 problems with erosion or ponding of surface water over filled areas. This may be done through
1018 site grading and revegetation, placement of rip rap, or other appropriate means. The application
1019 shall describe the method and length of time that surface water will be diverted from the site and
1020 the methods by which surface erosion or water ponding problems will be identified and
1021 corrected.

1022
1023 (e) Final cover design and construction: At closure, an infiltration barrier layer of
1024 subsoil, or a combination of materials as specified in the permit, a minimum of two (2) feet thick
1025 shall be constructed over the solid waste or any intermediate cover already in place. This
1026 infiltration barrier layer shall be covered with a minimum of six (6) inches of topsoil and graded
1027 to prevent erosion or surface water ponding. The infiltration barrier layer shall be constructed to
1028 minimize the total amount of moisture and the rate at which moisture infiltrates the final cover
1029 system. The Administrator may specify more stringent cover requirements if the Administrator
1030 determines that the site poses a significant threat to public health or the environment.

1031
1032 (f) Revegetation: At facility closure, any portion of the facility that has been
1033 disturbed by solid waste disposal activities shall be revegetated to minimize wind and water
1034 erosion of the final cover, consistent with the post-closure land use. The operator shall use a
1035 diverse vegetation mix, selected to be compatible with the climatic conditions, require little
1036 maintenance, and have root depths that will not exceed the depth of the final cover.

1037
1038 (g) Surveyed corners: At facility closure, all facility boundary corners shall be
1039 surveyed and marked with permanent survey caps.

1040
1041 (h) Access control: Facility fences, gates, and any other access restrictions shall be
1042 maintained until the site has been satisfactorily closed and revegetated, if post-closure land use
1043 requires establishment of vegetative cover.

1044
1045 (i) Waste containment systems: Waste containment systems, including but not
1046 limited to liners, leachate detection, collection and management systems, final cover systems,
1047 surface water structures, environmental monitoring systems, and corrective action systems shall
1048 be maintained throughout the closure and post-closure periods.

1049
1050 (j) Post-closure period:

1051
1052 (i) The post-closure period for industrial landfills that are required to comply
1053 with the groundwater monitoring requirements of Section 9(b)(i) of this Chapter shall extend for
1054 a period of not less than thirty years after certification of closure activities is approved by the
1055 Administrator. The minimum post-closure period may be terminated by the Administrator at an
1056 earlier date if the Administrator determines that the facility has been adequately stabilized and
1057 that the environmental monitoring or control systems have demonstrated that the facility closure
1058 is protective of public health and the environment consistent with the purposes of the

1059 Environmental Quality Act.

1060

1061 (ii) The post-closure period for industrial landfills that are not required to
1062 comply with the groundwater monitoring requirements of Section 9(b)(i) of this Chapter shall
1063 extend for a period of not less than five years after certification of closure activities is approved
1064 by the Administrator.

1065

1066 (iii) Following the initial minimum post-closure period specified in this
1067 subsection, the post-closure period shall be automatically extended until such time when the
1068 Administrator determines, upon petition by the operator accompanied by submission of relevant
1069 information, that the facility has been adequately stabilized in a manner protective of human
1070 health and the environment.

1071

1072 **Section 13. Standards for Corrective Action.**

1073

1074 (a) Assessment of corrective measures: All facilities required to start a corrective
1075 measures assessment shall initiate assessment of corrective measures within ninety days of a
1076 groundwater quality exceedance and complete the assessment in a reasonable time, determined
1077 by the Administrator. The owner or operator shall:

1078

1079 (i) Continue to conduct an assessment monitoring program;

1080

1081 (ii) Analyze the effectiveness of potential corrective measures to meet any
1082 alternate remedies that are being considered under paragraph (b) of this Section, considering:

1083

1084 (A) The performance, reliability, ease of implementation, and potential
1085 impacts of appropriate alternate remedies, including safety impacts, cross-media impacts, and
1086 control of exposure to any residual contamination;

1087

1088 (B) The time required to begin and complete the remedy;

1089

1090 (C) The costs of remedy implementation; and

1091

1092 (D) The institutional requirements such as state or local permits or
1093 other environmental or public health requirements that may substantially affect implementation
1094 of the remedy.

1095

1096 (iii) Provide an opportunity for public review of the corrective measures
1097 assessment, prior to selection of the remedy.

1098

1099 (b) Selection of remedy:

1100

1101 (i) The landfill operator must demonstrate to the Administrator how the
1102 selected corrective action remedy meets the remedy standards established in this subsection. The
1103 Administrator must approve the selected remedy and the remedial activities schedule before it is
1104 implemented.

- 1105
1106 (ii) The selected remedy must:
1107
1108 (A) Be protective of human health and the environment;
1109
1110 (B) Attain the groundwater protection standard;
1111
1112 (C) Control the source of releases of pollution so as to reduce or
1113 eliminate, to the maximum extent practicable, further releases of constituents into the
1114 environment that may pose a threat to human health or the environment; and
1115
1116 (D) Comply with standards for management of solid wastes specified
1117 in this Chapter.
1118
1119 (iii) The selection of the corrective action remedy must consider the following
1120 factors:
1121
1122 (A) Short- and long-term effectiveness of the remedy and the degree of
1123 certainty that the remedy will be effective, considering:
1124
1125 (I) Magnitude of reduction of existing risk to public health and
1126 the environment;
1127
1128 (II) Magnitude of risk of further releases of pollution;
1129
1130 (III) Type and degree of long-term management required,
1131 including monitoring, operation, and maintenance;
1132
1133 (IV) Short-term risks of exposure to the community, workers, or
1134 the environment during any excavation, transportation, and redisposal of solid wastes;
1135
1136 (V) Time until full protection is achieved;
1137
1138 (VI) Potential for exposure to humans and the environment from
1139 remaining solid wastes;
1140
1141 (VII) Long-term reliability of the engineering and any
1142 institutional controls; and
1143
1144 (VIII) Potential need for replacement of the remedy.
1145
1146 (B) The effectiveness of the remedy in controlling the source to reduce
1147 further releases based on consideration of the following factors:
1148
1149 (I) The extent to which containment will reduce further
1150 releases; and

- 1151
1152 (II) The extent to which treatment technologies will be used.
1153
1154 (C) The ease or difficulty of implementing the potential remedy,
1155 considering:
1156
1157 (I) Difficulty in constructing the technology;
1158
1159 (II) Expected reliability of the technology;
1160
1161 (III) Availability of necessary equipment and specialists; and
1162
1163 (IV) Available capacity of needed treatment, storage, and
1164 disposal facilities.
1165
1166 (D) Practicable capability of the operator, including a consideration of
1167 the technical and economic capability.
1168
1169 (E) The degree to which community concerns are addressed by a
1170 potential remedy.
1171
1172 (F) The need to coordinate with and obtain necessary approvals and
1173 permits from other agencies.
1174
1175 (iv) The Administrator shall approve a schedule for initiating and completing
1176 remedial activities, considering the following factors:
1177
1178 (A) Extent and nature of contamination;
1179
1180 (B) Practical capabilities of remedial technologies in achieving
1181 compliance with groundwater protection standards and other objectives of the remedy;
1182
1183 (C) Availability of treatment or disposal capacity for wastes managed
1184 during implementation of the remedy;
1185
1186 (D) Desirability of utilizing technologies that are not currently
1187 available but may offer significant advantages over already available technologies in terms of
1188 effectiveness, reliability, safety, or ability to achieve remedial objectives;
1189
1190 (E) Potential risks to human health and the environment from exposure
1191 to contamination prior to completion of the remedy;
1192
1193 (F) Classification of the aquifer under Chapter 8 of the Water Quality
1194 Rules, plus a consideration of the following factors:
1195
1196 (I) Current and future uses;

- 1197
1198 (II) Proximity and withdrawal rate of users;
1199
1200 (III) Groundwater quantity;
1201
1202 (IV) The potential damage to wildlife, crops, vegetation, and
1203 physical structures caused by exposure to solid waste;
1204
1205 (V) The hydrologic characteristics of the facility and
1206 surrounding lands;
1207
1208 (VI) Groundwater removal and treatment costs; and
1209
1210 (VII) The cost and availability of alternative water supplies;
1211
1212 (G) Practicable capability of the operator; and
1213
1214 (H) Any other factor considered relevant by the Administrator.
1215
1216 (v) The Administrator may determine that remediation of a release from a
1217 facility is not necessary if the operator demonstrates to the satisfaction of the Administrator that:
1218
1219 (A) The groundwater is additionally contaminated by substances that
1220 have originated from a source other than the facility, and those substances are present in
1221 concentrations such that the cleanup of the release from the facility would provide no significant
1222 reduction in risk to actual or potential receptors;
1223
1224 (B) The constituent is present in groundwater that is not currently or
1225 reasonably expected to be a source of drinking water and is not hydraulically connected with
1226 waters to which the hazardous constituents are migrating or are likely to migrate in a
1227 concentration that would exceed the groundwater protection standards established under Section
1228 6 of this Chapter; or
1229
1230 (C) Remediation of the release(s) is technically impracticable; or
1231
1232 (D) Remediation would result in unacceptable cross-media impacts.
1233
1234 (vi) A determination by the Administrator not to require remediation under
1235 paragraph (v) of this Section shall not affect the authority of the Administrator to require the
1236 operator to undertake source control measures or other measures that may be necessary to
1237 eliminate or minimize further releases to the groundwater, to prevent exposure to the
1238 groundwater, or to remediate the groundwater to concentrations that are technically practicable
1239 and significantly reduce threats to human health or the environment.
1240
1241 (c) Corrective action implementation:
1242

- 1243 (i) On a schedule approved by the Administrator, the operator must:
1244
1245 (A) Implement the selected remedy as approved by the Administrator;
1246
1247 (B) Continue groundwater monitoring to meet the requirements of the
1248 assessment monitoring program and to demonstrate the effectiveness of the selected remedy in
1249 meeting established water quality standards; and
1250
1251 (C) Take interim measures as determined necessary by the
1252 Administrator to ensure protection of public health and the environment. The Administrator shall
1253 consider the following factors in determining the need for interim measures:
1254
1255 (I) Time required to develop and implement a final remedy;
1256
1257 (II) Actual or potential exposure of nearby populations or
1258 environmental receptors to hazardous constituents;
1259
1260 (III) Actual or potential contamination of drinking water
1261 supplies or sensitive ecosystems;
1262
1263 (IV) Further degradation of the groundwater that may occur if
1264 remedial action is not initiated expeditiously;
1265
1266 (V) Weather conditions that may cause hazardous constituents
1267 to migrate or be released;
1268
1269 (VI) Risks of fire or explosion, or potential for exposure to
1270 hazardous constituents as a result of an accident or failure of a container or handling system; and
1271
1272 (VII) Other situations that may pose threats to human health and
1273 the environment.
1274
1275 (ii) If the selected remedy is not meeting the corrective action standards, the
1276 operator shall implement other methods or techniques that have been approved by the
1277 Administrator that could practicably achieve compliance with the requirements, unless there is
1278 no practicable alternative and the operator meets the requirements of paragraph (c)(iii) of this
1279 Section.
1280
1281 (iii) If a selected remedy cannot be practically achieved with any currently
1282 available methods, the operator must:
1283
1284 (A) Demonstrate to the satisfaction of the Administrator that the
1285 remedy cannot be achieved;
1286
1287 (B) Implement alternative measures which have been approved by the
1288 Administrator to control exposure of humans or the environment to residual contamination, as

1289 necessary to protect human health and the environment; and

1290

1291 (C) Implement alternate measures for control of the sources of
1292 contamination, which are consistent with the overall objective of the remedy and which are
1293 technically practicable.

1294

1295 (iv) All solid wastes managed pursuant to a remedy or interim measure under
1296 this Section shall be managed in a manner that complies with the requirements of this Chapter
1297 and that is protective of human health and the environment.

1298

1299 (v) Remedies shall be considered complete when:

1300

1301 (A) The operator complies with the groundwater protection standards
1302 at all points within the plume of contamination that lie beyond the relevant point of compliance
1303 established by the Administrator.

1304

1305 (B) Compliance with the groundwater protection standards shall be
1306 considered complete when concentrations of Appendix B constituents have not exceeded the
1307 groundwater protection standard(s) for a period of three consecutive years using the approved
1308 statistical procedures. The Administrator may approve an alternate length of time during which
1309 the operator must demonstrate compliance with the standard(s), considering:

1310

1311 (I) Extent and concentration of the release(s);

1312

1313 (II) Behavior characteristics of the hazardous constituents in
1314 the groundwater;

1315

1316 (III) Accuracy of the data; and

1317

1318 (IV) Characteristics of the groundwater; and

1319

1320 (C) All actions required to complete the remedy have been satisfied.

1321

1322 (vi) When the corrective action remedy is complete, the operator must:

1323

1324 (A) Notify the Administrator in writing, with supporting
1325 documentation, and place a notice in the facility operating record certifying that the remedy has
1326 been completed in compliance with Section 13(c)(v); and

1327

1328 (B) Petition the Administrator to be released from the financial
1329 assurance requirements for corrective action under Chapter 7 of these rules.

1330

1331 **Section 14. Financial Assurance Standards.**

1332

1333 Any operator of an industrial landfill subject to the financial assurance requirements of
1334 Chapter 7 of these rules, shall demonstrate compliance with the requirements of Chapter 7 of

1335 these rules.

1336

1337 **Section 15. Transfer, Treatment, and Storage Facility Standards.**

1338

1339 The permit application shall demonstrate compliance with the requirements of Chapter 6
1340 of these rules, if applicable.

1341

1342 **Section 16. Special Waste Standards.**

1343

1344 The permit application shall demonstrate compliance with the requirements of Chapter 8
1345 of these rules, if applicable.

1346

1347 **Section 17. Commercial Solid Waste Facility Standards.**

1348

1349 The permit application shall demonstrate compliance with the requirements of Chapter 10
1350 of these rules and W.S. § 35-11-514, if applicable.

1351

1352 **Section 18. Supporting Documentation/Appendices.**

1353

1354 (a) A USGS topographic map with a scale of 1:24,000 showing the proposed facility
1355 location or, if a 1:24,000 map is unavailable, USGS topographic map with a scale of 1:62,500 or
1356 another suitable topographic map.

1357

1358 (b) A map or aerial photograph of the area showing land ownership, land use, and
1359 zoning within one mile of the disposal site. The map or photograph shall be of sufficient scale to
1360 show all city boundaries, occupied dwelling, schools, hospitals, industrial buildings, water wells,
1361 water courses, roads, and other applicable details.

1362

1363 (c) A general facility plot plan (map) with a scale and contour intervals approved by
1364 the Administrator. The general facility plot plan shall at a minimum illustrate the following
1365 features:

1366

1367 (i) Landfill facility boundaries;

1368

1369 (ii) Points of access;

1370

1371 (iii) Location of soil borings and monitoring wells;

1372

1373 (iv) Location of proposed trenches or area fill locations;

1374

1375 (v) Working area/perimeter fire lane;

1376

1377 (vi) Working area/perimeter fence location; and

1378

1379 (vii) Locations of any facility buildings at the landfill.

1380

1381 (d) Additional facility plot plans at the same scale as the general facility plot plan,
1382 shall be submitted as necessary to show orderly development and use of the facility through the
1383 life of the site. These plot plans shall at a minimum contain the following information:

- 1384
1385 (i) Excavation plans for development of trenches or preparation of area fill
1386 locations;
1387
1388 (ii) Development of temporary surface water diversion structures which may
1389 be necessary to adequately control surface water run-on and run-off;
1390
1391 (iii) Access to active solid waste disposal areas, including development of
1392 internal roads;
1393
1394 (iv) Cover stockpile locations;
1395
1396 (v) Topsoil storage pile locations;
1397
1398 (vi) Litter screen placement information, if applicable;
1399
1400 (vii) Location of special waste management or disposal areas, if applicable; and
1401
1402 (viii) Other details pertinent to the development and use of the facility.
1403

1404 (e) A map showing proposed final post-closure contours prepared at the same scale as
1405 the general facility plot plan.
1406

1407 (f) If the industrial solid waste facility is included in a larger industrial property, a
1408 map that shows the facility boundaries in relation to the overall boundaries of the industrial
1409 property.
1410

1411 (g) Cross sections or drawing with sufficient specifications to describe:
1412

- 1413 (i) Internal litter catch screens or fences, if applicable;
1414
1415 (ii) Working area/perimeter fencing;
1416
1417 (iii) Access roads;
1418
1419 (iv) Trench or area fill method;
1420
1421 (v) Special waste areas, where appropriate;
1422
1423 (vi) Systems used for monitoring, collection, treatment, and disposal of
1424 leachate, if applicable;
1425
1426 (vii) Groundwater monitoring well design;

- 1427
1428 (viii) Methane gas venting and monitoring system, if applicable;
1429
1430 (ix) Surface and subsurface drain systems to control run-on, run-off and,
1431 inflow;
1432
1433 (x) All components of engineered containment systems, if applicable, which
1434 include, but are not limited to, liners, caps, and berms; and
1435
1436 (xi) Any other design details requested by the Administrator.
1437
1438 (h) Recordkeeping logs: A copy of the recordkeeping logs/forms that will be
1439 maintained during the operating life, closure, and post-closure maintenance period.

1. The regulatory requirements pertain only to the list of substances; the right hand column (Suggested Methods) is given for informational purposes only. See also footnotes 5.

2. Common names are those widely used in government regulations, scientific publications, and commerce; synonyms exist for many chemicals.

1447

1457
1458
1459

3. Chemical Abstracts Service registry number. Where "Total" is entered, all species in the groundwater that contain this element are included.
4. CAS index names are those used in the 9th Collective Index.
5. Suggested Methods refer to analytical procedure numbers used in EPA Report SW-846. "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA publication SW-846, Third Edition, Final Updates I (1993), II (1995), IIA (1994), IIB (1995), III (1997), IIIA (1999), IIIB (2005), IV (2008), and V (2015)." Analytical details can be found in SW-846. CAUTION: The methods listed are representative SW-846 procedures and may not always be the most suitable method(s) for monitoring an analyte under the regulations.

Chloroethane; Ethyl chloride	75-00-3	Ethane, chloro-	8021 8260 8261
Chloroform; Trichloromethane	67-66-3	Methane, trichloro-	8021 8260 8261
Chloroprene; 2-Chloro-1,3-butadiene	126-99-8	1,3-Butadiene, 2-chloro-	8021 8260
Dibromochloromethane; Chlorodibromomethane	124-48-1	Methane, dibromochloro-	8021 8260 8261
1,2-Dibromo-3-chloropropane; DBCP	96-12-8	Propane, 1,2-dibromo-3-chloro-	8011 8021 8081 8260 8261 8270
1,2-Dibromoethane; Ethylene dibromide; EDB	106-93-4	Ethane, 1,2-dibromo-	8011 8021 8260
o-Dichlorobenzene; 1,2-Dichlorobenzene	95-50-1	Benzene, 1,2-dichloro-	8021 8121 8260 8261 8270 8410
m-Dichlorobenzene; 1,3-Dichlorobenzene	541-73-1	Benzene, 1,3-dichloro-	8021 8121 8260 8261 8270 8410
p-Dichlorobenzene; 1,4-Dichlorobenzene	106-46-7	Benzene, 1,4-dichloro-	8021 8121 8260 8261 8270
trans-1,4-Dichloro-2-butene	110-57-6	2-Butene, 1,4-dichloro-, (E)-	8260 8261
Dichlorodifluoromethane	75-71-8	Methane, dichlorodifluoro-	8021 8260 8261

Appendix B – Constituents for Assessment Monitoring¹			
Volatiles (64)			
Common name ²	CAS RN ³	Chemical abstracts service index name ⁴	Suggested methods ⁵
1,1-Dichloroethane; Ethylidene chloride	75-34-3	Ethane, 1,1-dichloro-	8021 8260 8261
1,2-Dichloroethane; Ethylene dichloride	107-06-2	Ethane, 1,1-dichloro-	8021 8260 8261
1,1-Dichloroethylene; 1,1-Dichloroethene; Vinylidene chloride	75-35-4	Ethene, 1,1-dichloro-	8021 8260 8261
cis-1,2-Dichloroethylene; cis-1,2-Dichloroethene	156-59-2	Ethene, 1,2-dichloro-, (Z)-	8021 8260 8261
trans-1,2- Dichloroethylene; trans- 1,2-Dichloroethene	156-60-5	Ethene, 1,2-dichloro-, (E)-	8021 8260 8261
1,2-Dichloropropane; Propylene dichloride	78-87-5	Propane, 1,2-dichloro-	8021 8260 8261
1,3-Dichloropropane; Trimethylene dichloride	142-28-9	Propane, 1,3-dichloro-	8021 8260 8261
2,2-Dichloropropane; Isopropylidene chloride	594-20-7	Propane, 2,2-dichloro-	8021 8260 8261
1,1-Dichloropropene	563-58-6	1-Propene, 1,1-dichloro-	8021 8260 8261
cis-1,3-Dichloropropene	10061-01-5	1-Propene, 1,3-dichloro-, (Z)-	8021 8260 8261
trans-1,3- Dichloropropene	10061-02-6	1-Propene, 1,3-dichloro-, (E)-	8021 8260 8261
Ethyl benzene	100-41-4	Benzene, ethyl-	8015 8021 8260 8261
Ethyl methacrylate	97-63-2	2-Propenoic acid, 2-methyl- , ethyl ester	8260 8261
2-Hexanone; Methyl butyl ketone	591-78-6	2-Hexanone	8260 8261

Appendix B – Constituents for Assessment Monitoring¹			
Volatiles (64)			
Common name ²	CAS RN ³	Chemical abstracts service index name ⁴	Suggested methods ⁵
Isobutyl alcohol; 2-Methyl-1-propanol	78-83-1	1-Propanol, 2-methyl-	8260 8261
Methacrylonitrile	126-98-7	2-Propenenitrile, 2-methyl-	8260 8261
Methyl bromide; Bromomethane	74-83-9	Methane, bromo-	8021 8260 8261
Methyl chloride; Chloromethane	74-87-3	Methane, chloro-	8021 8260 8261
Methylene bromide; Dibromomethane	74-95-3	Methane, dibromo-	8021 8260 8261
Methylene chloride; Dichloromethane; DCM	75-09-2	Methane, dichloro-	8021 8260 8261
Methyl ethyl ketone; MEK; 2-Butanone	78-93-3	2-Butanone	8015 8260 8261
Methyl iodide; Iodomethane	74-88-4	Methane, iodo-	8260 8261
Methyl methacrylate	80-62-6	2-Propenoic acid, 2-methyl-, methylester	8260 8261
4-Methyl-2-pentanone; Methyl isobutyl ketone; MIBK	108-10-1	2-Pentanone, 4-methyl-	8260 8261
Naphthalene	91-20-3	Naphthalene	8021 8100 8260 8261 8270 8275 8310 8410
Propionitrile; Ethyl cyanide	107-12-0	Propanenitrile	8015 8260 8261
Styrene	100-42-5	Benzene, ethenyl-	8021 8260 8261

1465

1466 1. The regulatory requirements pertain only to the list of substances; the right hand column
1467 (Suggested Methods) is given for informational purposes only. See also footnotes 5.

1468

1469 2. Common names are those widely used in government regulations, scientific publications,
1470 and commerce; synonyms exist for many chemicals.

1471

1472 3. Chemical Abstracts Service registry number. Where "Total" is entered, all species in the
1473 groundwater that contain this element are included.

1474

1475 4. CAS index names are those used in the 9th Collective Index.

1476

- 1477 5. Suggested Methods refer to analytical procedure numbers used in EPA Report SW-846
1478 “Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA publication SW-846,
1479 Third Edition, Final Updates I (1993), II (1995), IIA (1994), IIB (1995), III (1997), IIIA (1999), IIIB
1480 (2005), IV (2008), and V (2015).” Analytical details can be found in SW-846. CAUTION: The
1481 methods listed are representative SW-846 procedures and may not always be the most suitable
1482 method(s) for monitoring an analyte under the regulations.
1483
- 1484 6. Xylene (total): This entry includes o-xylene (CAS RN 96-47-6), m-xylene (CAS RN
1485 108-38-3), p-xylene (CAS RN. 106-42-3), and unspecified xylenes (dimethylbenzenes) (CAS
1486 RN 1330-20-7).
1487
- 1488 7. This substance is often called Bis(2-chloroisopropyl) ether, the name Chemical Abstracts
1489 Service applies to its noncommercial isomer, Propane, 2,2"-oxybis[2-chloro- (CAS RN 39638-
1490 32-9)
1491
- 1492 8. Chlordane: This entry includes alpha-chlordane (CAS RN 5103-71-9), beta-chlordane
1493 (CAS RN 5103-74-2), gamma-chlordane (CAS RN 5566-34-7), and constituents of chlordane
1494 (CAS RN 57-74-9 and CAS RN 12789-03-6).
1495
- 1496 9. Toxaphene: This entry includes congener chemicals contained in technical toxaphene
1497 (CAS RN 8001-35-2), i.e., chlorinated camphene.
1498
- 1499 10. Polychlorinated biphenyls (CAS RN 1336-36-3); this category contains congener
1500 chemicals, including constituents of Aroclor 1016 (CAS RN 12674-11-2), Aroclor 1221 (CAS
1501 RN 11104-28-2), Aroclor 1232 (CAS RN 11141-16-5), Aroclor 1242 (CAS RN 53469-21-9),
1502 Aroclor 1248 (CAS RN 12672-29-6), Aroclor 1254 (CAS RN 11097-69-1), and Aroclor 1260
1503 (CAS RN 11096-82-5).
