Water Quality Rules Chapter 12 for Environmental Quality Council Hearing 22-3103

Increasing the setback for public water supply wells to 500 feet from UIC wastewater facility is arbitrary and capricious, not science or evidenced based. Hydrogeologic studies should be required to ascertain if a well will be affected by infiltrated wastewater, not an arbitrary limit. Many facilities, including State of Wyoming WYDOT, State Parks, and others will no longer be in compliance with this regulation. Future build out and development of commercial and governmental facilities will be impacted in a negative way by this regulation-often in instances where the well will clearly be unaffected by wastewater injection due to the underlying hydrogeology.
