

Lander Burton

We have seen a huge increase in air pollution here in Lander Wyoming. The EPA must set higher standards on air pollution especially methane. It is shocking how low our standards are compared to other countries. If we do not change now, we will end up ruining our children's future, the wildlife and environment that so many of us live here for, and inevitably will begin an exodus of people looking for healthy places to live. Hence, an enormous economic downfall of our town and county.
