RE: Comments on Air Quality Division Proposed Rulemaking (R-37)

Thank you for considering my comments on the proposed change in Wyoming's regulations on venting methane into our air and environment. I am strongly in favor of this proposal. I believe it will make an improvement in our state's air quality at very limited cost to the oil and gas industry. I feel that often because of jobs and our state economy, the needs of the people who live in our beautiful state come in a poor second. But I don't want Wyoming to become irreparably harmed with its citizens suffering from air pollution and its associated health problems (with our children, elderly and poor being the most disadvantaged). As a retired CPA, I believe adaption of this proposal is both ethically and financially beneficial to our state. Respectfully submitted, Susan E Mottram, Sheridan
