Objections from Lloyd & Nancy Eckstein

To whom it may concern: We do object on several levels.

Did they do an Archaeology study of the area since is used to be part of the original reservation and hunting ground of the tribes? (Could it have been a burial ground or teepee rings or arrowhead, or pottery?)

We would like to see a study on impact of vibration from mining to local area wells, and foundation of structures. Since they have been operation our foundation has cracked and our home has shifted causing the walls and floor structure to crack.

What are the plans to reclaim land plan (action) to keep water from standing to keep control mosquitoes and other flying insects. (We are the biggest county and have the highest west Nile due to standing water.) How it will be returned back to natural wetland or dry land state.

How do they plan to restore the area once the mining is done with an area to keep down dirt and dust from the air?

Safety issues with the truck traffic from in and out of the site and over full loads dropping on the grounds near the houses.

How do they plan to handle keeping wild life from the dig site? Such as the migratory birds, How are they disrupting the migratory nesting (if they decide to nest) grounds, whooping cranes, white swans and other migratory birds.

Is there a plan to maintain and contain spills from equipment and fuel leaks? What is it?

Lloyd and Nancy Eckstein
