

I am objecting to all and any part of this Waste Facility being built in this area.

It will be surrounded by residential areas and is almost in some of our back yards. We don't want it in our neighborhood. Our property values will drop dramatically. I can't even imagine the air quality and smell that we will be subjected to. There is also the potential health hazards, explosion risks, + chances of land contamination.

Out of seven large + barren states, there has to be some place suitable for this waste facility other than in a residential + business area.

Marlice,

Jim Ruby, Executive Secretary
Environmental Quality Council

Hi! Is there anyway that you can help us to block the building of this solid + hazardous waste facility being built in our area.

It is surrounded by residential areas and is almost in some of our back yards.

Mills sometimes seems to be like the "Step Child" when it comes to any improvements that our surrounding areas receive. That is bad enough, but the last thing that we need is to have this facility in our neighborhood.

Our property values will be cut at least in half & I can't even imagine the air quality and smell we will be subjected to. There is also the potential health hazards, explosions risks + chances of land contamination.

Please help us if you can.

Thanks,
Diane Parke, Siriv
