

BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING

IN THE MATTER OF OBJECTIONS TO ANCHOR)
ENVIRONMENTAL, INC'S WDEQ/SHWD PERMIT) DOCKET 13-5802
APPLICATION FILE NO. 50.022)

MEMORANDUM OF LAW AND BRIEF IN OPPOSITION TO PERMIT APPLICATION
FILE NO. 50.022

COMES NOW the Town of Mills, Wyoming, by and through its undersigned attorney, pursuant to the Wyoming Environmental Quality Council's Order, dated December 30, 2013, hereby submits the following *MEMORANDUM OF LAW AND BRIEF IN OPPOSITION TO PERMIT APPLICATION FILE NO. 50.022* filed by Anchor Environmental Services - AAA, Inc., hereinafter referred to as Anchor or applicant.

I. INTRODUCTION

The new facility proposed by Anchor Environmental demands summary denial as being both procedurally deficient and unlawfully located. Oil field wastes, including petroleum contaminated soils and used oil drilling fluids cannot be imported onto to these premises for treatment and storage under the circumstances of this case. The evidence will show the Town of Mills' municipal boundaries are less than one half mile from the proposed facility. The evidence will show the proposed facility is located within the Town of Mills' designated growth boundary areas. The evidence will show there are several hundred property owners within a half mile radius of the proposed facility and the closest occupied dwelling is less than one thousand feet from the proposed facility. The evidence will show that the number of occupied dwellings

located within one mile of the proposed facility has not even been determined by the applicant as required by law.

The Town of Mills' objections to this proposed facility are not limited to the zoning issues discussed in *Respondent, Wyoming Department Of Environmental Quality's Memorandum of Law Regarding Compliance With Zoning-Based Location Standards* filed on February 13, 2014. The Town raised several other concerns in its Preliminary Statement of Issues which have never been addressed. The Town raised additional issues in its responses to the Department of Environmental Quality's discovery requests which have also been ignored. The Town's objections include obvious defects in the permit application and notice requirements. The Town's objections also include significant issues regarding the location of the proposed facility. Summary denial of the application is warranted in this matter.

II. ILLEGAL OIL FIELD WASTE DISPOSAL FACILITY

Anchor's proposed facility is designed for the (commercial) transfer, treatment, storage and recycling of oilfield drilling fluid and sump wastes. (Application Summary, Section 1.5 General Facility Description attached hereto as Exhibit 1). In its permit application, Anchor states; "in the process of reducing/recycling the drilling fluid a small fraction may need to be **disposed** of as Petroleum Contaminated Soils and therefore the facility will need to comply with Chapter 8 Section 5 rules". (Application Summary, Section 2.1.5 Chapter 6 and Chapter 8 Location Standards, emphasis added). These petroleum contaminated soils are proposed to be disposed of by transporting the material to the City of Casper Landfill or the TDS landfill in Torrington, Wyoming. (Application Summary, Section 4.4 Waste Management Units, Paragraph 2).

Petroleum contaminated soils are not the only waste by-products which will be generated from its proposed facility. Anchor's proposal for dealing with unused wastewater is ambiguous and misleading. In one instance, Anchor represents that "water from this tank is expected to evaporate as a means of disposal". (Application Summary, Section 4.4 Waste Management Units, Paragraph 5). Yet, in the responses to Mills' discovery requests, Jim Skovgard, President of Anchor Environmental Services AAA, Inc., responded as follows:

INTERROGATORY NO. 9: With regard to any proposed wastewater storage tanks you will or may use upon the premises, please identify the physical dimensions including capacity of each such tank and specify the size and volume of all openings exposed to the environment to facilitate evaporation.

ANSWER:

Typical tanks are 12' wide by 20' long and hold 21,000 gallons. There will be no openings exposed to the environment to facilitate evaporation.

(Anchor Environmental's Answer to Town of Mills Interrogatories dated February 11, 2014, attached hereto as Exhibit 2). If there are no open tanks proposed, why does this application include the following information in support of the facility?:

"All open tanks will be covered in a tank netting meeting WDEQ USFWS and USEPA requirements whichever is more stringent. The above netting shall be fastened to the side of the tank on small tanks or suspended 4 to 5 feet above the tank, utilize a steel support structure and cables for large diameter tanks to allow for snow load sagging. Mesh size will be less than 1.5 inches. The netting shall be inspected daily and after any storm event for sagging or damage. Any damaged netting will be replaced as soon as possible and sagging netting will be re strung." (Application Summary, Section 4.2 Access Control).

Mills asserts the facility is clearly designed as a commercial oil field waste disposal facility that can only be authorized pursuant W.S. §35-11-306. Although the term "oil field waste" is not defined in the Environmental Quality Act, the definition of "disposal system" is provided in W.S. §35-11-103 (b) (iv) to mean a system for the disposal of wastes, either by surface or underground methods, including sewerage systems, **treatment works**, disposal wells

and absorption fields. (Emphasis added). The fact that some of the used oil field drilling fluids and sump wastes are intended to be recycled does not change the fact that petroleum contaminated materials will be brought to this location to be **treated** and stored. If the legislature had intended for “recycling facilities” to be exempted from the definition they would have provided a specific exemption.

Anchor’s proposed facility cannot even be considered without having first having obtained written consent from all owners of occupied dwellings within a one mile radius. W.S. §35-11-306 states: “In addition to any other requirement or restriction imposed under the Wyoming Environmental Quality Act, no person shall locate, construct or operate any commercial oil field waste disposal facility within one (1) mile of any (i) Occupied dwelling house without the written consent of the owner of the dwelling”. The violation of this statute is a sanctionable offense as provided by W.S. §35-11-901. The record in this matter is void of any written documents signed by any owners of occupied dwellings affected by their proposed facility. Mills asserts this statute does not grant authority to provide any variance from this requirement and this permit should be summarily denied.

III. ILLEGAL SOLID WASTE MANAGEMENT FACILITY

A solid waste management facility “means any facility for the transfer, treatment, processing, storage or disposal of solid waste.” W.S. §35-11-103 (d) (ii). Anchor’s proposed new facility was not permitted before July 1, 1973, does not constitute a “farming operation” and is not otherwise permitted or reviewed by the Wyoming oil and gas commission, or any other lawful air quality, water quality or land quality permitting authority.

Anchor’s proposed facility will bring oil field wastes from seven (7) states onto these

premises for processing, treatment and storage. Although some of the imported material is expected to be recycled, it is undisputed that certain by-products (including waste water, dried solid wastes and petroleum contaminated soils) will accumulate as process wastes.

Mills respectfully asserts this proposed facility should be summarily denied as violating W.S. §35-11-502. This proposed new facility cannot be permitted within one half mile of Mills' boundaries without Mills' consent or without a variance being granted by the director upon recommendation of the administrator after public hearing and upon written findings as required by W.S. §35-11-502. This facility is described in the application as encompassing 5+/- acres. (Application Summary, Section 1.5 General Facility Description). The facility is clearly designed for the commercial treatment, transfer, storage and disposal of wastes as defined by W.S. §35-11-103. Due to proximity restrictions, no permit for this facility may be issued without the Town's consent or without having held public hearings and obtained a proper variance as provided by W.S. §35-11-502.

IV. DUE PROCESS VIOLATIONS AND OTHER DEFECTS

1. Defective Notice

Chapter 1, section 2(a) of the DEQ General Provisions Regulations state: "Each application for a solid waste management facility permit described in this section shall contain information adequate to demonstrate compliance with the minimum standards for location, design and construction, operating, monitoring, closure and post-closure as specified in the applicable chapter of these rules and regulations. Permit application procedures are set out in W.S. §35-11-505." Among the most fundamental procedures would have been to notify the Town of Mills about this application, either when it was filed or once the application was

determined to be complete as required by law. Neither notice was provided to Mills in this case. The requirements are clear: "After the application is determined complete, the applicant shall give written notice of the application to the county where the applicant plans to locate the facility and to any municipalities which may be affected by the facility. The applicant shall simultaneously cause to be published once a week for two (2) consecutive weeks in a newspaper of general circulation within the county where the applicant plans to locate the facility notice of the proposed location, method, and length of operation and such other information as the council may require by rule and regulation." W.S. §35-11-502 (g).

On December 12, 2014 at a public meeting before the Mills Town Council, Mr. Skovgard admitted that the applicant had failed to include the Town of Mills in the notices prepared and mailed by its engineers in support of this application. (Minutes from this meeting are being prepared and will be made available when approved as provided by law by the Mills Town Council). Further evidence of this fatal omission is found in the Exhibits 3 and 4 attached hereto. These exhibits clearly show the Town of Mills was omitted from the mailing list prepared by applicant. Anchor had a statutory obligation to notify the Town of Mills and it failed to provide the required notice. This application should have never been approved with these obvious violations.

Mills asserts the notices provided by Anchor are also defective in failing to include all property owners within one mile radius of their proposed facility as required by W.S. §35-11-306. Exhibits 3 and 4 clearly demonstrate that Anchor attempted to notify the owners of property(excluding the Town of Mills) only within a one-half mile radius. A complete listing of property owners within the required one mile radius has apparently never been prepared by the applicant.

2. Failure To Project Operating Life

W.S. §35-11-502 (g) and Chapter 1, section 2(b)(i)(A)(IV) of the General Provisions Regulations both require the applicant publish notice in a newspaper of general circulation which notice shall contain specific information including the length of operation or operating life of the proposed facility. The notice published by Anchor on November 11 and 19, 2013 contains no information concerning projected operating life of this new facility. (Exhibit 5). The published notice was deficient and this application should summarily be denied.

Mills timely raised this issue in its responses to DEQ's discovery requests and sought disclosure of this vital information in its Interrogatories to Anchor. On February 11, 2014 Jim Skovgard, President of Anchor Environmental Services -AAA, Inc. provided the following information on this critical matter:

INTERROGATORY NO. 12: Please specify the projected life expectancy of your proposed facility. Please identify whether such information is contained in your application and/or your public notices published in a newspaper of general circulation in the affected area.

ANSWER:

I am unaware of the life expectancy of the facility or where that information might be found.

(Anchor Environmental's Answer to Town of Mills Interrogatories dated February 11, 2014, attached hereto as Exhibit 2). Applicant has never disclosed this required information and this application should be summarily denied.

Failure to provide the projected life expectancy is a significant defect in this application. This information is mandated by statute as a means to accurately determine the bonding and financial assurance requirements of the applicant. W.S. §35-11-306 (d) (i). Anchor's application cannot be granted under any lawful authority where it has failed to even consider the projected

life expectancy of its new facility. This Council must be provided an opportunity to consider all long-term economic consequences of the facility before any permit can be issued.

3. Deficient Corporate Authority

Applicant, Anchor Environmental Services - AAA, Inc. is a Corporate entity. (Exhibit 6). Chapter 6, section 2(b)(i)(B) of the DEQ Transfer, Treatment And Storage Facility Regulations clearly require that applications filed by a corporate entity must be signed by at least two principal officers. The application filed in this matter is only signed by one corporate officer. (Exhibit 7).

Failure to provide the required second signature also violates Chapter 6 Section 2 (b) (iii) (A) which requires the application to provide: “The name, address and telephone number of the operator of the facility to whom the permit would be issued, **and a listing of any administrative order, civil or administrative penalty, assessment, bond forfeiture, misdemeanor or felony convictions, or court proceeding for any violations of any local, state or federal law relating to environmental quality or criminal racketeering in which the applicant (including any partners in a partnership or executive officers in any corporation, if the applicant is a partnership or corporation) has been or is currently involved;**” (Emphasis added). The single corporate officer submitting this application did not even acknowledge these requirements or make any attempt to address these required disclosures in the application. This application has not met the required minimum standards and should have never even been approved.

4. Deficient Manager Information

Chapter 6 Section 2 (b) (iii) (B) of the DEQ Transfer, Treatment And Storage Facility Regulations require that applicant provide the name, address, and telephone number of the solid waste manager. A description of the basic training and examination program, to be used by the

operator to assure compliance with the requirements of this chapter shall be included. The description shall include a specific listing of the training courses, and the required frequency of attendance of each course by the solid waste manager. The application filed in this matter does not provide sufficient Manager Information. Although the name, address and telephone number of the manager is provided, there is no identification or even a general discussion of any training program to be used by the operator to assure compliance with the regulations. The only information provided concerning training is the statement: "Personnel records of training and examinations completed by the solid waste manager and staff shall be maintained at the facility or an approved alternative location and available for inspection and copying as specified by Chapter 1, Section 1 (g)" (Application Summary, Section 1.3 Manager Information). The application also fails to contain any specific listing of any training courses, or the required frequency of attendance of each course by each solid waste manager. The failure to provide this information also violates Chapter 6, Section 5 (a) (B) of the Transfer, Treatment, and Storage Facility Regulations which require the manager of a transfer, treatment and storage facility to attend the classroom or field training program described in the approved permit application.

5. Deficient Waste Screening Measures

Chapter 6 Section 2 (b) (iii) (J) (III) of the DEQ Transfer, Treatment And Storage Facility Regulations requires applicant to provide a description of the waste screening measures used to prevent the management of unauthorized wastes. The waste screening measures may include specific waste testing procedures to verify that only authorized wastes are accepted at the facility. Applicant's waste screening measures are contained in paragraph 4.3 of the application summary. Applicant states that inspection of material will be performed as it is received at the facility but does not identify either the methods of inspection or the minimum qualifications for

any persons performing the inspection. Applicant states: "If any illegal dumping were to occur, it would be contained in the receiving tank and be immediately removed from the receiving tanks and reloaded into the transports which delivered it." (Application Summary, Section 4.3 Waste Screening). Mills respectfully asserts all material must be properly screened before it is even transported to the site and certainly before it is unloaded and mixed with other potentially incompatible substances into the receiving tanks.

Applicant has provided a profile sheet to document the material meets required testing protocols however the profile sheet has significant potential for abuse. (Exhibit 8). Under Anchor's screening protocol, any person may certify the constituents of the waste material by personal knowledge and without any requirement for testing. Mills asserts it is impossible for any person to accurately certify the levels of constituents such as Arsenic, Barium, Cadmium, Chromium, Lead, Mercury, Selenium, Benzene, Carbon Tetrachloride, Chlorobenzene, Chloroform, 1,2 Dichloroethane, 1,1 Dichloroethane, Tetrachloroethylene, Trichloroethylene, Vinyl Chloride, Cresol, 1,4 Dichlorobenzene, 2,4 Dinitrotoluene, Hexachlorobenzene, Hexachloroethane, Methyl ethyl ketone, Nitrobenzene, Pentachlorophenol, pyridine, 2,4,5 Trichlorophenol and 2,4,6 Trichlorophenol based upon personal knowledge alone. Applicant should not be allowed to accept potentially hazardous, toxic and carcinogenic materials based only upon personal knowledge of the material's contents. Applicant should be limited to accepting waste materials only when the levels of these potentially harmful constituents have been accurately determined through laboratory testing.

6. Deficient Odor, Dust and Noise Control Measures

Anchor's application is clearly deficient, if not misleading in its description of the measures that will be taken at the site to control vectors and potential odors, dust, and noise that

could occur as a result of the waste management facility. Petitioner is required pursuant to Chapter 6 Section 2 (b) (iii) (J) (XI) to provide a description of the measures that will be taken at the site to control vectors and potential odors, dust, and noise that could occur as a result of the waste management activity. Applicant avoided providing this information by stating: “The facility will be within a building which will contain dust and odors.” (Application Summary, Paragraph 2.1.4 Areas Susceptible to Dust, Odor or Nuisance Problems). Although part of the proposed facility will be enclosed within a building, applicant failed to disclose and address the proposed outdoor operations whereby waste materials will be transferred, processed and stored in the open environment. The Town of Mills asserts that Petitioner should be required to formulate extensive odor monitoring and control plans for all operations before any permit is issued.

7. Deficient Waste Disposal Protocols

Petitioner’s application fails to adequately address any characterization and disposal protocols for the wastewater and process waste accepted and processed in this proposed facility as required by Chapter 6 Section 2 (b) (iii) (J) (XII, XIII, and XIV). The ratio of liquid to solid wastes transported to and processed at this facility is expected to be significant given the nature of the facility. Mills respectfully asserts that under such circumstances Petitioner should be required to demonstrate specific protocols for the processing and disposal of waste water and other process wastes. Applicant should not be permitted to withhold such vital information by simply stating “This section is not applicable due to this facility not generating any waste material.” (Application Summary, Section 4.12 Process Waste Management and Section 4.13 Wastewater Management).

8. Deficient Monitoring

The nature and size of this facility including the type of materials transferred to,

processed and stored upon the premises, along with its proximity to habited dwellings, should require comprehensive air, odor, soil, dust, ground water and surface monitoring protocols before any permit is issued as required by Chapter 6 Section 2 (b) (iii) (K). Although the application contains some monitoring for operations inside the building, monitoring of outdoor operations is not proposed until “breakthrough into the secondary liner system occurs”. (Application Summary, Section 5.1 Groundwater Monitoring System). How can interested parties know whether breakthrough has occurred without monitoring? Mills respectfully asserts Anchor should not be allowed to wait until damage has been done before implementing comprehensive monitoring protocols.

9. Zoning issues

Mills has requested applicant provide information pertaining to the re-zoning of the property. On January 17, 2014, Mills submitted its Request For Production Of Documents Number 5 requesting the applicant produce copies of all notices provided to landowners, governmental agencies and others pertaining to the re-zoning of the property to Light Industrial, including all documents pertaining to the receipt of any certified mailings if applicable.

Applicant has failed to provide any response to this request as required by law. (Exhibit 2).

Applicant should not be allowed to withhold this information especially in light of their failure to provide the Town of Mills with notice of its permit application as required by law.

On June 5, 2012 the Natrona County Board Of Commissioners passed its Resolution to change the zoning classification of the applicant’s property from Urban Mixed Residential to Light Industrial. (Exhibit 10). The action taken by the Board of County Commissioners was done against the recommendation of the Natrona County Planning and Zoning Commission which forwarded a “failed pass” recommendation to the County after conducting independent public

hearings. Mills asserts the finding of the Board of County Commissioners that the zone change does not adversely affect the public health, safety and general welfare of Natrona County is not supported by competent evidence. Mills asserts the decision by the Board of County Commissioners was not based upon full consideration of all issues raised in this application.

The evidence will show that Mills' objected to the re-zoning of this proposed site and/or the issuance of a conditional use permit before the Natrona County Commissioners. (Exhibit 9). Mills has not waived any rights to contest and object to the issuance of the proposed permit before this Council. Whether any appeal of the county's re-zoning was filed pursuant to W.S. §18-5-201 is irrelevant to this matter. Whether the Town had standing to even initiate such appeal against the County is debatable. W.S. §18-5-201 provides the county broad authority to regulate its lands independent of the zoning laws enacted by incorporated cities and towns. Mills has standing to challenge the issuance of this permit upon any and all lawful grounds and this Council is vested with broad authority to reject the application upon any lawful basis.

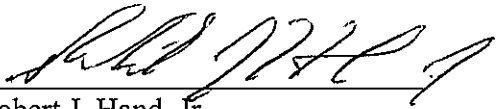

V. SUMMARY

The United States Environmental Protection Agency defines environmental justice as the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations and policies. Fair treatment means that no group of people, including any racial, ethnic or socioeconomic group should bear a disproportionate share of the negative environmental consequences resulting from industrial, municipal and commercial operations. (See: <http://www.epa.gov/region1/ej/>).

The Town of Mills has raised a number of significant issues regarding the location of this

proposed facility, obvious defects in the required public notices and other fatal defects in the application. Mills respectfully asserts that its citizens owning property and living within close proximity to this facility are not required to bear the environmental consequences of this facility under the facts presented in this case. Mills asserts this permit should be summarily denied without requiring the parties opposing this obviously defective application to expend additional public funds.

Respectfully submitted this 18th day of February, 2014.

Robert J. Hand, Jr,
Mills Town Attorney

Wyoming Department of Environmental Quality
Solid & Hazardous Waste Division

SOLID WASTE PERMIT APPLICATION

**Anchor Environmental
Transfer, Storage and Treatment Facility**

APPLICATION SUMMARY

In accordance with the Wyoming Department of Environmental Quality – Solid and Hazardous Waste Division (WDEQ-SHWD) Chapter 6, Sanitary Landfill Regulations, the Anchor Environmental Treatment, Transfer, Storage and Drilling Fluid Recycling facility permit application and supporting information is being submitted for approval. This facility will be accepting used drilling fluids from oil and gas exploration activities for recycling and shop sump waste for mechanical drying and recycling or disposal at either the City of Casper landfill or the TDS landfill near Torrington Wyoming. Exhibits are included in this permit application.

1.0 GENERAL INFORMATION

1.1 Application Form	Section 2.b.i-ii
-----------------------------	------------------

The completed Solid Waste Permit Application Form is included as pages 2 and 3 of this application.

1.2 Operator Information	Section 2.b.iii.A
---------------------------------	-------------------

The operator of the Anchor Environmental – Transfer Storage and Treatment Facility
Jim Skovgard
Anchor Environmental, Inc.
P.O. Box 2513
Mills, Wyoming 82644
307-265-4047

Anchor Environmental, knows of no administrative order, civil, or administrative penalty assessment, bond forfeiture, civil, misdemeanor or felony conviction or court proceeding for any local, state, or Federal law occurring within a minimum of five (5) years relating to environmental quality or criminal racketeering of the manager, operator, partners, and/or executive officers.

1.3 Manager Information	Section 2.b.iii.B
--------------------------------	-------------------

The facility Manger is:

Jim Skovgard
P.O. Box 2513
Mills, Wyoming 82644

307-265-4047

Personnel records of training and examinations completed by the solid waste manager and staff shall be maintained at the facility or an approved alternative location and available for inspection and copying as specified by Chapter 1, Section 1 (g).

1.4 Legal Description	Section 2.b.iii.C
------------------------------	-------------------

The facility lies within Section 2, T33N, R80W 6th PM, Natrona County, Wyoming. Additional site boundary information is contained in Exhibit 1.

1.5 General Facility Description	Section 2.b.iii.D
---	-------------------

This facility is a transfer treatment storage and recycling facility. It manages shop sump waste and reduces, recycles, and reuses drilling fluid an oilfield exempt waste. EPA states that to be considered exempt wastes must be:

- Uniquely Associated with Exploration & Production Operations, and
- Derived from Primary Field Operations. Drilling fluid is within this classification.

The facility will mechanically separate drilling fluid to remove impurities and recover reusable drilling fluid, transfer the recovered drilling fluid to storage in a tank battery and ultimately return it to our oil and gas exploration customers. Also collected and managed will be non-hazardous shop sump wastes. The sump waste will be mechanically reduced and the dried solids will be disposed of in either the Casper Regional Solid Waste Facility or in TDS's Facility in Torrington. Mechanical reduction will be completed using tanks, shakers, and centrifuges to separate the materials received at the facility. Drilling fluid will be cleaned and the reusable material will be transferred to the tank battery. The impurities cleaned from the drilling fluid consisting mainly of sand, silt and gravel will be further processed through a vertical centrifuge (dryer or Vortex) and the resulting dried material will be landfilled. Shop sump waste will be managed separately. It will be reduced mechanically by passing it over shakers and processed mechanically in the centrifuge resulting in a dry material which will be landfilled. Water will be recovered in the mechanical process and will be reused in this facility and/or returned to our oil and gas customers. Excess water may also be disposed of in an injection disposal well operated by Mel's Water Service provided the water meets the conditions of organic chemical analysis of municipal and industrial wastewater method 624—purgeables (See Exhibit 20 for Method). The facility will have a 100 foot by 200 food building enclosing a vertical centrifuge dryer, a centrifuge an 8,600 CY depressed bed for mixing semi-dry solids with drying agents and a mixing tank for reconditioning recovered drilling fluid. This building will also house a truck wash bay. Next to the building will be one 21,000 gallon receiving tanks, one 21,000 gallon tank for storage of recycled drilling fluids, one 21,000 gallon recovered oil tank and one 21,000 gallon tank for reused water storage for a total of (4) 21,000 gallon storage tanks. Recovered oil will be re-incorporated with the recycled drilling fluid or sold to oil recycling companies such as

Safety Kleen or Tri-State oil. This facility's parcel of land is 5 +/- acres in size, which is located in Natrona County just out the City of Mills. Used drilling fluids will be accepted for recycling from oil and gas exploration clients, Shop sump waste will be profiled by sampling for the constituents listed in Exhibit 15, non-hazardous shop waste will be managed by mechanical drying and/or mixing in this facility. The reused water generated in these processes will be collected and pumped into the onsite tank. The maximum capacity of the facility for recycled drilling fluid is 84,000 gallons; the storage of the receiving tanks 21,000 gallons combined with the 21,000 gallons drilling fluid tank battery and 21,000 gallons used oil tank. The facility will accept material for batch process treatment at the rate at which it can process it, which is estimated to be approximately 2,000 gallon/min. No material will be accepted at the facility once the receiving tanks reach 19,000 gallons, the mixing/storage pad reaches 35 cubic yards, the drilling fluid tanks reach 19,000 gallons or the recovered Oil tank reaches 19,000 gallons until the material is transported back to our customers or for disposal. This facility will be designed for a capacity of 537,600 gallons of drilling fluid in the future but is currently being permitted to process up to 84,000 gallons. Any permit revision will be submitted to WDEQ for determination if proposed changes will constitute minor or major permit modifications.

1.6 Surface & Mineral Ownership	Section 2.b.iii.E
--	-------------------

All surface rights are in Jim Skovgard's name. See deeds included in Exhibit 1.

2.0 LOCATION STANDARDS

All New Facilities...

2.1.1 Local Land Use and Zoning	Section 2.b.iii.F
--	-------------------

The Anchor Environmental site was re-zoned Light Industrial with a Conditional Use Permit issued by the Natrona County Commissioners on June 5, 2012. A copy of the zoning map for this site is in Exhibit 3 as well as resolutions for the Zone Change and Continual Use Permit.

2.1.2 Areas Susceptible to Groundwater or Surface Impacts	Section 2.b.iii.F
--	-------------------

If there is a leak or spill at this facility there is no immediate groundwater or surface water impacts. The map in Exhibit 4 shows that all rivers and streams are more than a mile away and there are no reservoirs downstream from this site. Groundwater was not found at 11.5 feet below the surface see section 3.3 of this permit for more details.

2.1.3 100 Year Floodplain	Section 2.b.iii.F
----------------------------------	-------------------

Using the Federal Emergency Management Agency's FEMAette map #56025c1985D updated last July 16, 2004 this property is in the Other Areas - Zone X, which is areas of 0.2% annual chance of flooding. See Exhibit 5 for the FEMAette maps showing this zone.

2.1.4 Areas Susceptible to Dust, Odor or Nuisance Problems	Section 2.b.iii.F
---	-------------------

The predominant wind direction is to the north east. The facility will be within a building which will contain dust and odors. All soil shall be damp enough to prevent dust from being made during unloading. Dry soils which may produce dust will be removed from the site once able to pass a paint filter test. The road dust shall be controlled by spraying with water purchased from the city of Mills.

There should not be excessive noise pollution on site. There will be some truck traffic noise and a front end loader running on site for loading dried material every couple days. If there is any predicable extra noise that will take place on the site the operator shall do the work between 8 am and 5 pm to limit the disturbance to any residences nearby.

2.1.5 Chapter 6 and Chapter 8 Location Standards	Section 2.b.iii.F
---	-------------------

This site will be handling used drilling fluids an EPA exempt oil field waste and the in process of reducing/recycling the drilling fluid a small fraction may need to be disposed of as Petroleum-Contaminated Soils and therefore the facility will need to comply with Chapter 8 Section 5 rules. Enclosed in Exhibit 18 is a letter of acceptance from David Baker Natrona County Fire Inspector for the location.

New Outdoor Facilities... (2.2.1-9 NOT APPLICABLE DUE TO THE FACILITY BEING ENCLOSED)

3.0 GEOLOGY, GROUNDWATER, SOILS

3.1 Soils	Section 2.b.iii.G
------------------	-------------------

The proposed facility and immediate vicinity are comprised of Cody Shale and Cody Shale derived clayey overburden sediments. Six (6) test borings performed at the site encountered clay overlying claystone (shale) bedrock through 11.5 feet. USCS Classification of CL. Test boring logs have been included in Exhibit 13.

3.2 Geology	Section 2.b.iii.G
--------------------	-------------------

Area geology consists of Cretaceous Cody Shale. Cody shale is described as “Gray soft shale and lenticular sandstone beds; gray limy shale at base, (WGS, 1980). The Cody Shale in central Wyoming is estimated to be 1,500 feet to 3,000 feet thick in the vicinity. Based upon geologic map, the shale strikes northwest-southeast and dips to the northeast. Samples collected at the site were highly weathered and fractured. However, there were no indications of secondary mineralization along fractured surfaces indication past movement of water within the fractures. A regional geologic map has been attached in Exhibit 14.

3.3 Groundwater Occurrence	Section 2.b.iii.G
-----------------------------------	-------------------

Groundwater is produced in small quantities from fractures within the Cody Shale. Water within the sandstone layers can produce up to 20 gallons per minute, but Cody Shale is not generally considered a viable source of water for even stock watering (Christ and Lowery, 1972). Test borings drilled at the site indicate that groundwater is more than 11.5 feet. There are no permitted water well is located within ½ mile of the subject property, which is an indication of the lack of water found in the Cody Shale in this area.

3.4 Groundwater Quality	Section 2.b.iii.G
--------------------------------	-------------------

“The quality of water in the Cody Shale and its equivalents is more uniform than the quality of water in other formations in the marine and continental rock unit: however, water from the Cody and its equivalents is considered to be of inferior quality because it is too highly mineralized for most uses.” (Christ and Lowery, 1972). The following table illustrates some water quality data from the Cody Shale.

Location (T.R.S)	Well Depth (ft)	Calcium (mg/l)	Magnesium	Sodium (mg/l)	Potassium (mg/l)	Bicarbonate (mg/l)	Sulfate (mg/l)	Chloride (mg/l)	Fluoride (mg/l)	Nitrate (mg/l)	TDS (mg/l)	Hardness (mg/l)	SAR	Conductance (uohms/cm)	pH
33-79-33	100	145	80	600	3.3	481	1470	75	4	6.6	2720	690	9.9	3470	7.8
34-79-17	405	14	3.8	1260	54	509	2130	46	1	0.3	3590	50	77	4840	7.8

Based on this data, groundwater would be classified as Type III due to high TDS and Sulfate concentrations.

3.5 Potential Impacts to Surface Water and Ground Water
--

Section 2.b.iii.H

Groundwater was not encountered within the test borings drilled at the site. Because the facility is designed with a secondary containment system and overlies Cody Shale groundwater monitoring is not proposed. Additionally, the secondary containment will lie on re-compacted clay from on-site Cody Shale which will have a coefficient of permeability of more the 10^{-7} cm/sec. Groundwater wells will be installed if water is detected in the secondary containment.

3.6 Site Suitability

Section 2.b.iii.I

Site topography, geology, and geography are suitable for the proposed facility. The site has already been graded and has some slope has been utilized in the facility design. Please refer to the site map in Exhibit 6. As previously discussed in sections 3.1 through 3.4, the site is underlain by low permeable Cody Shale. Along with controls proposed in the design, the facility has little chance of impacting the groundwater or the environment. Site location standards are addressed in section 2.

Remainder of This Page Intentionally Left Blank

4.0 DESIGN, CONSTRUCTION AND OPERATION

4.1 Service Area	Section 2.b.iii.J.I
-------------------------	---------------------

This facility will accept EPA exempt oil field waste predominantly drilling fluid. It will also accept non-hazardous sump waste from clients anywhere in Wyoming, Montana, Idaho, Utah, North and South Dakota, Nebraska, and Colorado. The material accepted at this facility will be reduced, and recycled drilling fluids returned to customers, water will be reused on site or in the oil fields or disposed of by deep disposal well and dried material transported to the Casper Landfill or TDS in Torrington for disposal.

4.2 Access Control	Section 2.b.iii.J. II
---------------------------	-----------------------

Access to the facility is provided by a gravel road off of Hanley Street. The point of access shall be identified by a sign, which shall be easily readable and maintained in good condition and contain the following information: facility name, name and phone number of a responsible person to contact in the event of emergencies, the hours of operation, the wastes that are prohibited from disposal at the facility, and a requirement to notify the facility operator of any asbestos wastes. There shall be a sign posted at the front gate which reads that scavenging is prohibited. Access shall be prohibited at any time other than the facility's posted operational hours.

The facility is fenced to prevent unauthorized access by the public, livestock, and wildlife, and to contain litter within the facility. The facility is completely enclosed by fences. The fences are currently constructed of barbed wire with plans in the future to enclose the facility with chain link fences. The access road shall be equipped with a gate which can be locked when the facility is unattended, and all access road shall be constructed to enable use under inclement weather conditions.

The open tank on site will be checked daily to ensure the pH of the water is between 5 and 10 and that there are no visible hydrocarbons on the water. All open top tanks will be covered in a tank netting meeting WDEQ, USFWS and USEPA requirements whichever is more stringent. The netting shall be fastened to the side of the tank on small tanks or suspended 4 to 5 feet above the tank, utilize a steel support structure and cables for large diameter tanks to allow for snow load sagging. Mesh size will be less than 1.5 inches. The netting will be inspected daily and after any storm event for sagging or damage. Any damaged netting will be replaced as soon as possible and sagging netting will be re strung.

4.3 Waste Screening	Section 2.b.iii.J.III
----------------------------	-----------------------

Inspection of material will be performed as it is received at the facility. A profile sheet documenting the material meets required testing protocols will be submitted to the operator before any material is transported to the facility. A copy of the profile sheet and waste tracking manifest is included in Exhibit 9. If any illegal dumping were to occur, it would be contained in the receiving tank and be immediately removed from the receiving tanks and reloaded onto the

transports which delivered it. Prohibited wastes include any material(s) generated during the refining of oil and regulated quantities of hazardous waste, Asbestos containing material (friable and non- friable), Materials with Naturally Occurring Radioactive Material (NORM) in excess of OSHA standards and PCBs and are noted on a sign posted at the facility entrance. The WDEQ-SHWD will be notified if any prohibited wastes are discovered.

The recordkeeping that Anchor Environmental will use includes profiles of all material received, manifest of all loads accepted and certificates of management or disposal. Copies of completed profiles manifests and certificates of management/disposal will be maintained in electronic format at the facility. See Exhibit 9 for standard forms.

4.4 Waste Management Units	Section 2.b.iii.J.IV
-----------------------------------	----------------------

The facility will consist of five distinct management units. These units are:

1. Unit 1, Receiving Tanks, Consists of a 21,000 gallon tank and Mechanical Shakers located on the western edge of the process building set inside a slightly sloping concrete berm. Unit 1's capacity is 21,000 gallons. The facility will accept material until unit 1 accumulates 19,000 gallons of unprocessed material.
2. Unit 2, Mechanical Separation will be achieved using both a Horizontal Centrifuge and a Vertical Centrifuge to remove sand, silt and gravel from the liquids. The material first passes through the shakers and receiving tanks in Unit 1 then it passes through the horizontal centrifuge. The semi-liquid solids effluent (sand and gravel and some liquids) from the shakers in Unit 1 above and the solids effluent of the centrifuge pass into the Vertical Centrifuge where all remaining liquid is removed. Recovered Sand Silt and Gravel is passed to unit 3 the mixing bed/dry material storage pad. Recovered drilling fluid passes to Unit 4 the Tank battery and recovered water passes to Unit 5 the water storage tank.
3. Unit 3, Mixing/Storage pad. The mechanically dried solids will be stored on Unit 3 the mixing pad. The capacity of the mixing pad is 8,600 cubic yards. Unit 3 will also be used to manage material which may cause Unit 2 to foul. If the mixing pad is used for solidification, a drying agent such as bentonite, fly ash, clean fill soil or other drying agent will be mixed with the semi-liquid material being treated. No liquid or semi-liquids will be stored on the mixing pad for more than 24 hours. The facility will not accept new material in Unit 1 if the pad has more than 35 cubic yards in storage. Dried material will be transported to the City of Casper Landfill or the TDS Landfill in Torrington Wyoming.
4. Unit 4, 21,000 gallon tank and drilling fluid mixing tank, a tank battery will be located on the Northern side of the facility. Up to 19,000 gallons of recovered/recycled drilling fluid will be stored and the remaining 21,000 gallons storage will consist of a separate tank for recovered oil. Recovered/Recycled drilling fluid will be returned to the customer who sent it to the facility. Recovered oil maybe incorporated into the recycled drilling fluid in the mixing tank and/or sold to an oil recycler.
5. Unit 5 is a 21,000 gallon water tank which will receive recycled water from facility operations. The open tank will hold 21,000 gallons completely full but there will be a pump shut off sensor at 2.5 ft full for freeboard from wind across the tank. (Exhibit 6)

The water from this tank is expected to evaporate as means of disposal but may be recycled and returned to our oil and gas drilling customers. It may also be pumped out and transported to a disposal well owned and operated by Mel's Water Service following EPA 624 testing (Exhibit 20) to classify the water as non hazardous.

Process Flow Charts are included in Exhibit 19 to illustrate this process.

4.5 Secondary Containment and Leak Detection Systems

Section 2.b.iii.J.V

The secondary containment for the onsite above ground tank will be an earthen berm 120 feet by 180 feet, 4 ft deep with 3:1 slopes on the inside. The bermed containment area will hold 538,524 gallons and the secondary containment is required to hold 110% of the tank size which is 23,100 gallons. The inside of the berm and the bottom of the bed secondary containment will be lined with 30 ml PVC and then a 6" layer of sand with no aggregate greater than 1" will cover the PVC liner for protection from the tank and UV rays. The secondary containment for the 21,000 gallon receiving tank will consist of a V shaped reinforced concrete pad 6 inches thick. This pad has a top width of 76 feet, length of 100 feet, and a depth of 2 feet. The containment volume is 56,784 gallons which is 270% of the largest tank capacity. The secondary containment for the 21,000 gallon drilling fluid tank is a reinforced concrete pad 4 inches thick which is 141 feet by 40 feet and 1 foot deep. The containment volume is 42,168 gallons which is 144% of the largest tank capacity. The building itself will also be designed as a secondary containment for the mechanical equipment and any storage inside of the building. The size of the containment will be 100 feet by 100 feet and 6 inches deep which is 5,000 cubic feet plus the mixing bed volume of 8,640 cubic feet.

The leak detection system for the mixing bed will be a 6" layer of sand with no aggregate greater than 1" over a 30 ml PVC liner. The PVC liner will follow the slope of the bed and collect any leakage on the north side of the bed then drain to the sampling pipe (see detail on Sheet 5 of Exhibit 6) where a 6" PVC slotted pipe will be installed to check for leakage. Below the PVC liner, the existing shale shall be compacted to a permeability of 10^{-7} . All above mentioned items will be installed in accordance with the Construction Quality Assurance Plan which can be found in Exhibit 17. The leak detection riser will be inspected for any leakage on a daily basis. If any leakage is found the WDEQ shall be notified and there shall be water wells installed according to sections 3 and 5 of this permit. Any fluids found in the leak detection system will be sent to a laboratory and tested for TPH, DRO and GRO. If detected additional sampling for RCRA metals and VOC's (EPA 8260) will be required. Records will be maintained and up dated with results of all inspections and testing (if needed). All above mentioned items will be installed in accordance with the Construction Quality Assurance Plan which can be found in Exhibit 17.

4.6 Surface Water Structures

Section 2.b.iii.J.VI

There are small ditches on the uphill side of each area to help drain off the precipitation before it runs into the tanks secondary containment or the drying beds. Using the SCS TR-55 method the for a 100 yr 24 hr storm there will be 3.9 cfs coming off the hill. The diversion ditches are 1 ft deep with 2:1 side slopes, manning n=0.03 and sloped at 2% to 20%. At this slope with all the

flow in one ditch it will be flowing 0.76 feet deep. This flow is actually split between 3-1 ft deep.

4.7 On-site Traffic Control

Section 2.b.iii.J.VII

Traffic will enter the site from the north driving past the offices and checking in with the operator. They will proceed to designated unloading pad unload their soils material into one of the 5-holding tanks. They will then continue in a counter clockwise direction around the beds until they come out near the office again or can pull into the washout bay and wash their truck. There will be a sign posted at the gate clearly stating the speed limit to be followed while on site. The beds shall be identified by a sign, which shall be easily readable and maintained in good condition.

4.8 Fire Fighting and Emergency Procedures

Section 2.b.iii.J.VIII

A minimum 10-foot wide fire lane is constructed around the area and within the working area or perimeter fence. Portable fire extinguishers are present in all on-site vehicles and operating equipment. Cell phones are used by operators to call the local fire department for emergency protection measures. Soils for firefighting will come from the closest soil stockpiles on-site. Removal of burning materials will not be done because of personnel and equipment safety issues. Every attempt will be made to extinguish the fires in-place, except that no water will be used to fight fires unless approved by WDEQ-SHWD. The WDEQ-SHWD will be notified within 24 hours of the occurrence of any fire, with a written report placed in the operating record for each fire.

4.9 Facility Signs

Section 2.b.iii.J.IX

Each point of access shall be identified by a sign, which shall be easily readable and maintained in good condition and contain the following information: Facility name, name and phone number of responsible person to contact in the event of emergencies, the hours of operation, the wastes that are prohibited from disposal at the facility and a requirement to notify the landfill operator or any asbestos wastes. Access shall be prohibited at any time other than the facility's posted operational hours. All access roads shall be equipped with a gate which can be locked when the facility is unattended, and all access roads shall be constructed to enable use under inclement weather conditions.

4.10 Litter Control

Section 2.b.iii.J.X

This site will not be accepting general refuse material but will need to control any incidental litter (paper that blew out of truck or dropped plastic bottle). To control litter, the facility shall maintain an effective routine litter collection program. This routine program shall take place both within the facility perimeter and along access roads. The routine program will consist of cleaning internal fences weekly and perimeter roads monthly or will occur as necessary when fences contain excessive litter.

The prevailing wind direction in the area of the facility is from the southwest. See the enclosed wind speed information, in Exhibit 6, as published in the Wyoming Climate Atlas, dated 2004,

for wind speed and direction data available for the local area.

4.11 Vector, Odor, Dust, Noise Control	Section 2.b.iii.J.XI
---	----------------------

See section 2.1.4 of this permit.

4.12 Process Waste Management	Section 2.b.iii.J.XII
--------------------------------------	-----------------------

This section is not applicable due to this facility not generating any waste material.

4.13 Wastewater Management	Section 2.b.iii.J.XIII
-----------------------------------	------------------------

This section is not applicable due to this facility not generating any waste material.

4.14 Confirmation Sampling and Analysis	Section 2.b.iii.J.XIV
--	-----------------------

The facility shall test for the following before sending the waste soil to the landfill: all materials to be tested non hazardous according to WDEQ Solid Waste Guideline #8 Sump Waste Management prior to being accepted at the facility, and Paint Filter Test. The test results shall be provided to the Landfill Staff at the time of disposal. Letters of acceptance of the material by the Casper Regional Solid Waste Facility and TDS are included in Exhibit 12.

4.15 Other Design, Construction and Operation Information	Section 2.b.iii.J.XV
--	----------------------

See Exhibit 17

Remainder of This Page Intentionally Left Blank

5.0 ENVIRONMENTAL MONITORING

5.1 Groundwater Monitoring System	Section 2.b.iii.K
--	-------------------

Groundwater monitoring will be performed if breakthrough into the secondary liner system occurs. If breakthrough occurs 4 groundwater monitoring wells will be installed to the first water or a maximum of 200 feet below ground surface. Four monitoring wells would be installed. If saturated conditions are encountered, then the wells would be screened across that water bearing zone. Otherwise the wells will be screened from 10 to 50 feet and completed in accordance with WDEQ rules and regulations.

5.2 Groundwater Monitoring Program	Section 2.b.iii.K
---	-------------------

If monitoring wells are necessary to be installed an appropriate monitoring plan will be developed and tailored to the circumstances of the action requiring well installation.

5.3 Other Monitoring Information	Section 2.b.ii.K
---	------------------

See above sections.

Remainder of This Page Intentionally Left Blank

6.0 CLOSURE

6.1 Post-Closure Land Use**	Section 2.b.iii.L.I
------------------------------------	---------------------

It is anticipated that the land will be used for other light industrial work or remain unused once the facility has been adequately stabilized in a manner protective of human health and the environment. The owner/operator, or its successors, shall assure that post-closure use of the property will be restricted to prevent any disturbance to the facility's containment system including caps and liners, or the functioning of the facility's monitoring system.

6.2 Closure Procedures**	Section 2.b.iii.L.II
---------------------------------	----------------------

Upon closure the owner will have all remaining soils removed from site and disposed of at the proper facility. The water in the tank will be tested for any residual petroleum contamination, using a DRO-GRO ASTM method, it will then be emptied, filtered or used in accordance with WDEQ regulations based on the test results. The soil around the building will be inspected to insure that the soil is - permissible to leave on site. All contaminated soil will be removed and sent to the proper facility. The owner shall decontaminate the bed and piping then either leave them in place, or remove the bed by breaking it up into small concrete pieces and taking to the local landfill as construction waste. If any monitoring wells have been installed they will continue to be maintained and sampled until the facility has been satisfactorily closed, as determined by the Administrator, at which time the wells shall be properly abandoned.. The owner will make semiannual visits to the site for 3 years to check on the grading and erosion on site. They will check for signs of unwanted ponding.

6.3 Public Notice of Closure**	Section 2.b.iii.L.III
---------------------------------------	-----------------------

Notice will be filed with the County Clerk of Natrona County, in Casper, Wyoming and published in an area newspaper 3 times in 4 weeks on different days of the week and posted at all points of access.

6.4 Environmental Monitoring Program**	Section 2.b.iii.L.IV
---	----------------------

After closure detection monitoring shall continue to be maintained and sampled until the facility has been satisfactorily closed, as determined by the Administrator, at which time the wells shall be properly abandoned.

6.5 Access Controls**	Section 2.b.iii.L.V
------------------------------	---------------------

Access to the site will be controlled at the gate to the north of the office. During operating hours there will be an employee on site to check in loads. During closed hours the gate will be shut and locked. The perimeter fence will be checked regularly and maintained so the only access is from the north gate. If another entrance is started in the future it will also follow these controls

Once closure is initiated closure activities shall be completed within one year. During the closure and post-closure periods, the Anchor Environmental personnel will make periodic inspections to observe if there are any erosion or water ponding problems, or any disturbance to the facilities cover cap. These inspections shall occur no less than twice a year, typically in April and October, after the spring runoff season and before the winter freeze up and snow cover. Additional inspections will be made after there are occurrences of high precipitation events that may cause erosion and ponding problems. Other features to be inspected include, but are not limited to, access controls, waste containment systems, surface water diversion systems, and environmental monitoring systems. Anchor Environmental will have closure certified by a Licensed Professional Engineer.

7.0 EXHIBITS

7.1 USGS Topographic Map or Aerial Photograph**	Section 2.b.iv
--	----------------

A USGS Topographic map dated 1961, photo-inspected 1984, named Goose Egg, Wyoming, Natrona County covering the Anchor Environmental Facility can be found in Exhibit 8.

7.2 General Facility Plot Plan(s)	Section 2.b.v
--	---------------

See Exhibit 6 Sheet 2.

7.3 Cross Sections and Design Details	Section 2.b.vi
--	----------------

See Exhibit 6 Sheets 3 and 4.

7.4 Record Keeping Log	Section 2.b.vii
-------------------------------	-----------------

See Exhibit 9.

Remainder of This Page Intentionally Left Blank

8.0 FINANCIAL ASSURANCE

8.1 Cost Estimates**

Section 2.b.viii

Cost estimate calculations for closure and post-closure costs are included as Exhibit 10 of this permit application.

8.2 Mechanism**

Section 2.b.viii

Bonding will be done through a surety bond in accordance with Chapter 7 regulations once the financial assurance has been found to be adequate.

Remainder of This Page Intentionally Left Blank

9.0 RENEWAL APPLICATION REQUIREMENTS

9.1 Previously Approved Amendments and Revisions	Section 2.e.i.
---	----------------

There is no previously approved permit or revisions for this facility.

9.2 New Amendments and Revisions	Section 2.e.ii
---	----------------

There are no new Amendments and revisions.

9.3 Proposed Construction and Operation Specifications	Section 2.e.iii
---	-----------------

There are no previously approved permits or revision for this facility.

9.4 Correction of Operational Deficiencies	Section 2.e.iv
---	----------------

There are no previously approved permits or revision for this facility. If any operational deficiencies are found they shall be fixed and documentation shall be put with the site and operators copy of this permit.

9.5 Updated Financial Assurance Requirements	Section 2.h
---	-------------

This is a new facility so there are no updates to the financial assurance requirements.

Remainder of This Page Intentionally Left Blank

10.0 APPENDICES

10.1 Appendices	
------------------------	--

There are no Appendices in the submittal. There are however Exhibits providing detailed information supporting this renewal permit application are listed in the Table of Contents and referenced appropriately in the application narrative. Each Exhibit is delineated by a tabbed divider.

**ANCHOR ENVIRONMENTAL'S ANSWER TO TOWN OF MILLS
INTERROGATORIES**

Anchor Environmental – AAA Services, pursuant to the Wyoming Environmental Quality Council's (EQC) December 30, 2013 scheduling order in this case, submits this Answers to the Town of Mills Interrogatories.

INTERROGATORY NO. 1: Please identify any witnesses you intend to call to testify at the Hearing in this matter, identify any all documents you intend to use in connection with such testimony, describe the subject matter of his or her testimony, and state the substance of the facts and opinions to which he or she is expected to testify and a summary of the basis therefore.
ANSWER:

Anchor provided this information in its designation of witnesses filed January 8, 2014. On file with the WDEQ EQC. This answer can be viewed at:

<https://deq.state.wy.us/eqc/Docket/13-5802%20Anchor%20Environmental/Anchor%20Environmental%20Witness%20List.pdf>

INTERROGATORY NO. 2:

Please identify all factors you considered in selecting your proposed location for this new Solid Waste Transfer, Treatment and Storage facility and identify any alternate sites or locations which were considered or could have been considered regardless of economic cost.
ANSWER:

This site was selected because it is properly zoned by Natrona County for industrial use, Anchor Environmental – AAA Services applied for and was granted a conditional use permit by Natrona County.

The remainder of the question is not answered.

INTERROGATORY NO. 3:

Please identify any other facilities located within the State of Wyoming, whether owned by Anchor Environmental, Inc. or other persons/entities performing similar services with regard to the transfer, treatment, or storage of used drilling fluids and sump wastes and if known, or can be determined through reasonable diligence, please explain the process or processes used to treat the waste materials at each facility identified.

ANSWER:

Anchor does not own any other facilities. The remainder of the question is not answered.

INTERROGATORY NO. 4:

Please identify any other facilities you have operated, inspected, considered, or modeled whether owned by Anchor Environmental, Inc. or other parties/entities using the same or similar mechanical reduction or separation processes to treat equal quantities of similar wastes as proposed by your application. Please identify any other person or entity you have consulted with, in developing your business plan and design specifications for the proposed facility.

ANSWER:

Anchor has not owned or operated, inspected, considered or modeled any facility of this type. Anchor retained Inberg Miller Engineers, 1120 E C Street, Casper WY 82601 to prepare this permit application.

Inberg Miller Engineers completed the design of the facility as it must be constructed according to our permit application. See section 4.0 of the permit application. (on file with Natrona County Library)

INTERROGATORY NO. 5:

Please identify your protocols for screening and profiling any used/waste material prior to being accepted at your proposed facility. Please identify the difference in any screening protocol as may be applied to different types of wastes (i.e. sump wastes vs. used drilling fluids), identify the minimum qualifications of all persons performing any screening and identify the types of inspection and testing that will be performed on every material.

ANSWER:

Waste screening is described in Section 4.3 of the permit application. The remainder of the question is not answered.

INTERROGATORY NO. 6:

In addition to mechanical separation, please identify any other, additional or alternative processing methods which are, or could be used to perform the same or similar functions regardless of the economic cost of using such alternate technology.

ANSWER:

This question is not answered.

INTERROGATORY NO. 7: Please describe, in detailed narrative fashion, each and every structure, equipment, implement or other device you anticipate will or may be used outside of your proposed enclosed facility, including but not limited to the number and capacity of all outdoor storage tanks, receiving tanks, drying beds, evaporation ponds and other outdoor operations and explain in detail how each such device, structure and equipment will or may be used.

ANSWER:

This question is not answered.

**ANCHOR ENVIRONMENTAL'S ANSWER TO TOWN OF MILLS
INTERROGATORIES**

Anchor Environmental – AAA Services, pursuant to the Wyoming Environmental Quality Council's (EQC) December 30, 2013 scheduling order in this case, submits this Answers to the Town of Mills Interrogatories.

INTERROGATORY NO. 1: Please identify any witnesses you intend to call to testify at the Hearing in this matter, identify any all documents you intend to use in connection with such testimony, describe the subject matter of his or her testimony, and state the substance of the facts and opinions to which he or she is expected to testify and a summary of the basis therefore.
ANSWER:

Anchor provided this information in its designation of witnesses filed January 8, 2014. On file with the WDEQ EQC. This answer can be viewed at:

<https://deq.state.wy.us/eqc/Docket/13-5802%20Anchor%20Environmental/Anchor%20Environmental%20Witness%20List.pdf>

INTERROGATORY NO. 2:

Please identify all factors you considered in selecting your proposed location for this new Solid Waste Transfer, Treatment and Storage facility and identify any alternate sites or locations which were considered or could have been considered regardless of economic cost.
ANSWER:

This site was selected because it is properly zoned by Natrona County for industrial use, Anchor Environmental – AAA Services applied for and was granted a conditional use permit by Natrona County.

No other locations were considered.

INTERROGATORY NO. 3:

Please identify any other facilities located within the State of Wyoming, whether owned by Anchor Environmental, Inc. or other persons/entities performing similar services with regard to the transfer, treatment, or storage of used drilling fluids and sump wastes and if known, or can be determined through reasonable diligence, please explain the process or processes used to treat the waste materials at each facility identified.

ANSWER:

Anchor does not own any other facilities. I don't know of any other facilities or processes.

INTERROGATORY NO. 4:

Please identify any other facilities you have operated, inspected, considered, or modeled whether owned by Anchor Environmental, Inc. or other parties/entities using the same or similar mechanical reduction or separation processes to treat equal quantities of similar wastes as proposed by your application. Please identify any other person or entity you have consulted with, in developing your business plan and design specifications for the proposed facility.

ANSWER:

Anchor has not owned or operated, inspected, considered or modeled any facility of this type. Anchor retained Inberg Miller Engineers, 1120 E C Street, Casper WY 82601 to prepare this permit application.

Inberg Miller Engineers completed the design of the facility as it must be constructed according to our permit application. See section 4.0 of the permit application. (on file with Natrona County Library)

INTERROGATORY NO. 5:

Please identify your protocols for screening and profiling any used/waste material prior to being accepted at your proposed facility. Please identify the difference in any screening protocol as may be applied to different types of wastes (i.e. sump wastes vs. used drilling fluids), identify the minimum qualifications of all persons performing any screening and identify the types of inspection and testing that will be performed on every material.

ANSWER:

Waste screening is described in Section 4.3 of the permit application. There is only one screening protocol it is described in Section 4.3 of the permit application. Minimum qualifications of persons performing screening are not a permit requirement because we plan to manage non-hazardous materials. Testing and screening is described in Section 4.3 of the permit application.

INTERROGATORY NO. 6:

In addition to mechanical separation, please identify any other, additional or alternative processing methods which are, or could be used to perform the same or similar functions regardless of the economic cost of using such alternate technology.

ANSWER:

I do not know of any other alternative processing methods which will achieve the results we want to achieve at the proposed facility.

INTERROGATORY NO. 7: Please describe, in detailed narrative fashion, each and every structure, equipment, implement or other device you anticipate will or may be used outside of your proposed enclosed facility, including but not limited to the number and capacity of all outdoor storage tanks, receiving tanks, drying beds, evaporation ponds and other outdoor operations and explain in detail how each such device, structure and equipment will or may be used.

ANSWER:

There will be four storage 21,000 gallon tanks one for receiving one for water one for oil and one for reclaimed drilling fluid. There are no outdoor drying beds, evaporation ponds or other outdoor operations. Storage tanks will be used for storage.

INTERROGATORY NO. 8: To the best of your ability, please estimate the ratio of SOLID to LIQUID (or combined sludge wastes as defined in Chapter 1, Section 1 (e) (I)) you anticipate will or may be processed at your proposed facility.

ANSWER:

The material processed at the facility is generally wet material which contains enough liquid that it cannot pass the paint filter test and therefore it can't be sent directly to the landfill. There is no way to estimate the ratio of solid to liquid.

INTERROGATORY NO. 9: With regard to any proposed wastewater storage tanks you will or may use upon the premises, please identify the physical dimensions including capacity of each such tank and specify the size and volume of all openings exposed to the environment to facilitate evaporation.

ANSWER:

Typical tanks are 12' wide by 20' long and hold 21,000 gallons. There will be no openings exposed to the environment to facilitate evaporation.

INTERROGATORY NO. 10: Have you set a maximum limit for the amount of wastewater which will be stored upon the premises, and if so, please specify such amount and whether such information is contained in your application and where such information may be found.

ANSWER:

Maximum water storage is 21,000 gallons as listed in the permit application in section 4.4 paragraph 5.

INTERROGATORY NO. 11:

Please explain in detail your protocol for disposing of unused liquid (or sludge) wastes in your daily operations and please identify any specific arrangements, plans or protocols for the removal of such wastes in case of emergency.

ANSWER:

You assume that there will be such a waste generated from our proposed operations. Such wastes will not exist and no imagined waste plans and imagined waste plan emergencies can exist.

We have applied for this permit and set-up a process for dealing with waste generated in the course of recycling drilling fluids and drying shop and sump waste. I would direct your attention to the permit application in it's entirety for an answer to your questions.

INTERROGATORY NO. 12: Please specify the projected life expectancy of your proposed facility. Please identify whether such information is contained in your application and/or your public notices published in a newspaper of general circulation in the affected area.

ANSWER:

I am unaware of the life expectancy of the facility or where that information might be found.

INTERROGATORY NO. 13: Please identify each and every method, process and technique which will be used to monitor, sample or detect potential air, soil and groundwater contamination at your proposed facility.

ANSWER:

Environmental monitoring is covered in section 5.0 of the permit application.

INTERROGATORY NO. 14: Please identify each and ever person, including name and address who you provided notice of the re-zoning of the subject property to Light Industrial use, and identify whether such notices were received by such persons or were returned undelivered.

ANSWER:

I asked Inberg-Miller Engineers to prepare this permit application. They provided the required notices and kept records.

INTERROGATORY NO. 15: Please identify each and every person, including name and address who you provided notice of your application for the proposed facility, and identify whether such notices were received by such persons or were returned undelivered.

ANSWER:

I asked Inberg-Miller Engineers to prepare this permit application. They provided the required notices and kept records. I don't have access to this material.

REQUESTS FOR PRODUCTION

REQUEST FOR PRODUCTION NO. 1: Please produce any and all documents, lists, books, notes, memoranda, or other references which were consulted, referred to or identified in or used in responding to the Mills' Interrogatories and, for each document so produced, please set forth the specific Interrogatories to which the documents are responsive.

RESPONSE:

I used the permit application and nothing else to answer.

REQUEST FOR PRODUCTION NO. 2: Please produce a true and accurate copy of your application filed with the Wyoming Department of Environmental Quality for the proposed facility including all exhibits, attachments and signature pages.

RESPONSE:

Ok

REQUEST FOR PRODUCTION NO. 3: Please produce any exhibits you intend to introduce at the hearing in this matter.

I intend to use the permit application and nothing else.

RESPONSE:

REQUEST FOR PRODUCTION NO. 4: Please produce copies of all notices provided to landowners, governmental agencies and others pertaining to your application for the proposed facility, including all documents pertaining to the receipt of any certified mailings if applicable.

RESPONSE:

I asked Inberg-Miller Engineers to prepare this permit application. They provided the required notices and kept records. I don't have access to this material.

REQUEST FOR PRODUCTION NO. 5: Please produce copies of all notices provided to landowners, governmental agencies and others pertaining to the re-zoning of the property to Light Industrial, including all documents pertaining to the receipt of any certified mailings if applicable.

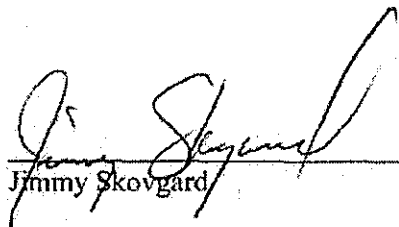

CERTIFICATE OF SERVICE

I, Jim Skovgard, certify that at Casper, Wyoming, on February 11, 2014, I served a copy of the foregoing **ANCHOR ENVIRONMENTAL'S ANSWER TO TOWN OF MILLS INTERROGATORIES** by electronic mail and by depositing copies of the same in the United States mail, postage prepaid, duly enveloped and addressed to the following:

Alan Edwards SHWD Administrator alan.edwards@wyo.gov	Todd Parfitt Director, DEQ Todd.Parfitt@wyo.gov

Jimmy Skovgard

RESPONSE:

I asked Inberg-Miller Engineers to prepare this permit application. They provided the required notices and kept records. I don't have access to this material.

REQUEST FOR PRODUCTION NO. 6: Please produce copies of all contracts, memoranda of understanding or other documents pertaining to the disposal of any liquid or solid wastes by any third parties.

RESPONSE:

Acceptance letters are included in Exhibit 12 of the permit application.

RE: COMPLETENESS REVIEW - PUBLIC NOTICE
ANCHOR ENVIRONMENTAL SOIL TREATMENT, TRANSFER, & RECYCLING FACILITY
SHWD FILE #50.022

Dear Patrick:

In accordance with the WDEQ letter dated September 28, 2012, regarding the Completeness Review for the referenced project, we are providing documentation that we have complied with the Public Notice requirements.

- Copy of finalized Public Notice for all mailings and publication in the Casper Star Tribune.
- Public Notice's sent via First Class Mail
 - Mayors and County Commissions within 50 miles of transfer station (see copy of mail label list – 1 page).
 - Property owners within one-half mile of transfer station (see copy of mail label list. List shows address corrections – 9 pages.)
 - Interested parties (see copy of mail label list provided by WDEQ – 7 pages).
 - Proof of mailing: AMBI Mail & Marketing receipt showing 494 public notices mailed on November 1, 2012.
- Affidavit of Publication from the Casper Star Tribune confirming that the Public Notice was published on October 30 and November 5, 2012.

Please let us know if there are questions regarding this documentation.

PUBLIC NOTICE

In accordance with the provisions of the Wyoming Environmental Quality Act and Chapter 1, Section 1(f) of the Solid Waste Rules and Regulations, Anchor Environmental has submitted a permit application for a new solid waste management facility called the Anchor Environmental Soil Treatment, Transfer and Recycling Facility SHWD File # 50.022.

This facility will provide for the transfer / treatment / storage of Oil and Gas Fluids/Solids and sump waste which have been generated within the State of Wyoming. The nine (9) acre facility is located on Hanley Street in Natrona County just west of the City of Mills. More specifically, this facility is located in the NW1/4SE1/4, Section 2, Township33 North, Range 80 West of the 6th P.M., Natrona County, Wyoming. The total volumetric capacity of this facility is estimated to be 740 cubic yards of petroleum contaminated soils (PCS), 361 cubic yards of non PCS and 205,000 gallons of liquid (water).

The Department of Environmental Quality, Solid and Hazardous Waste Division (DEQ) has reviewed the permit application and determined that it is complete. The DEQ's solid waste rules, in Chapter 1, Section 2 (b)(i), require that the applicant must provide public notice that the application has been determined to be complete and inform the public that there is an opportunity to file comments on the application. This publication provides notice of that opportunity. Additional information on the permit application and the DEQ's completeness review may be obtained at the address below.

The Department is now conducting a detailed review of the application to determine if it is technically adequate. If, after The Department's technical review, the agency finds that the applicant has complied with all applicable standards for a facility of this type, DEQ will issue a proposed permit and public notice of the proposed permit will be provided.

Any interested person has the right to file comments on the permit application and the DEQ's completeness review. The period for providing comments shall begin on October 30, 2012 and end on December 5, 2012. Comments must be received by 5:00 PM on the last day of the notice period. Comments on this application must be submitted in writing to the Department of Environmental Quality, Carl Anderson, Administrator, Solid and Hazardous Waste Division, 122 West 25th Street, Cheyenne, Wyoming 82002. The Department may, at its discretion, conduct a public hearing on this permit application.

In accordance with the Americans with Disabilities Act, special assistance or alternative formats will be made available upon request for individuals with disabilities.

PUBLIC NOTICE

In accordance with the provisions of the Wyoming Environmental Quality Act and Chapter 1, Section 1(f) of the Solid Waste Rules and Regulations, Anchor Environmental has submitted a permit application for a new solid waste management facility called the Anchor Environmental Soil Treatment, Transfer and Recycling Facility, SHWD File # 50.022.

This facility will provide for the transfer, treatment, storage of Oil and Gas Fluids/Solids and sludge waste which have been generated within the State of

Wyoming. The nine (9) acre facility is located on Hanley Street in Natrona County just west of the City of Mills. More specifically, this facility is located in the NW 1/4 SE 1/4, Section 2, Township 33 North, Range 80 West of the 6th P.M., Natrona County, Wyoming. The total volumetric capacity of this facility is estimated to be 740 cubic yards of petroleum contaminated soils (PCS), 861 cubic yards of non PCS and 205,000 gallons of liquid (water).

The Department of Environmental Quality, Solid and Hazardous Waste Division (DEQ) has reviewed the permit application and determined that it is complete. The DEQ's solid waste rules, in Chapter 1, Section 2 (b)(i), require that the applicant must provide public notice that the application has been determined to be complete and inform the public that there is an opportunity to file comments on the application. This publication provides notice of that opportunity. Additional information on the permit application and the DEQ's completeness review may be obtained at the address below.

The Department is now conducting a detailed review of the application to determine if it is technically adequate. If, after The Department's technical review, the agency finds that the applicant has complied with all applicable standards for a facility of this type, DEQ will issue a proposed permit and public notice of the proposed permit will be provided.

Any interested person has the right to file comments on the permit application and the DEQ's completeness review. The period for providing comments shall begin on October 30, 2012 and end on December 5, 2012. Comments must be received by 5:00 PM on the last day of the notice period. Comments on this application must be submitted in writing to the Department of Environmental Quality, Carl Anderson, Administrator, Solid and Hazardous Waste Division, 122 West 25th Street, Cheyenne, Wyoming 82002. The Department may, at its discretion, conduct a public hearing on this permit application. In accordance with the Americans with Disabilities Act, special assistance or alternative formats will be made available upon request for individuals with disabilities.

RE: TECHNICAL REVIEW - PUBLIC NOTICE
ANCHOR ENVIRONMENTAL SOIL TREATMENT, TRANSFER, & RECYCLING FACILITY
SHWD FILE #50.022

Dear Patrick:

In accordance with the WDEQ letter dated October 25, 2013, regarding the Technical Review for the referenced project, we are providing documentation that we have complied with the Public Notice requirements.

- Copy of finalized Public Notice for all mailings and publication in the Casper Star Tribune.
- Public Notice's sent via First Class Mail or Certified Mail
 - Solid Waste Districts, Mayors, and County Commissions within 50 miles of transfer station (see copy of mail label list – 1 page).
 - Property owners within one-half mile of transfer station (see copy of mail label list. List shows address corrections – 9 pages.)
 - Interested parties (see copy of mail label list provided by WDEQ – 7 pages).
 - Proof of mailing: AMBI Mail & Marketing receipt showing 494 public notices mailed on November 7, 2013.
- Affidavit of Publication from the Casper Star Tribune confirming that the Public Notice was published on November 11 & 19, 2013.
- Affidavit of personal deliver of the Permit Applications to Natrona County Library and Natrona County Clerks Office.

Please let us know if there are questions regarding this documentation.

PUBLIC NOTICE

In accordance with the provisions of the Wyoming Environmental Quality Act and Chapter 1, Section 1(f) of the Solid Waste Rules and Regulations, Anchor Environmental has submitted a SW Chapter 6 permit application for a new solid waste management facility called the Anchor Environmental Treatment, Transfer and Recycling Facility.

The facility is located in Natrona County just west of the City of Mills, Wyoming. More specifically, this facility is located in Section 2, T33N, R80W 6th PM, Natrona County, Wyoming. The facility provides for the transfer/treatment/recycling of used drilling fluid and sump wastes which have been generated within Wyoming, Colorado, Montana, Idaho, Nebraska, North Dakota and South Dakota. The total volumetric capacity of this facility is estimated to be approximately 84,000 gallons of liquid waste and 8,600 cubic yards of solids.

The Department of Environmental Quality, Solid and Hazardous Waste Division (DEQ) has reviewed the application and determined that it is generally complete and suitable for publication. The DEQ's solid waste rules, in Chapter 1, Section 2 (b)(ii), require that the applicant must provide public notice that a proposed permit has been issued and inform the public that there is an opportunity to file comments on the proposed permit before it is issued in final form. The notice is also required to indicate that the public may file formal written objections to issuance of a final permit. This publication provides notice of those opportunities.

Copies of the permit application, the DEQ's reviews of the application, and the proposed permit can be viewed at DEQ's Casper office (125 N. Durbin, Suite 100), at the Natrona County Public Library (307 East 2nd St, Casper, WY), or the Natrona County Clerk's Office (200 N. Center St, Casper, WY).

Any interested person has the right to either: provide comments on the proposed permit, which DEQ will consider prior to taking final action on the permit application, or file formal written objections to the proposed permit. The period for providing comments, or filing formal written objections to the proposed permit, shall begin on November 11, 2013 and end on December 18, 2013. Any comments or formal written objections must be received by 5:00 PM on the last day of the notice period. Comments or formal objections must be submitted in writing to the Department of Environmental Quality, Todd Parfitt, Director, 122 West 25th Street, Cheyenne, WY 82002. Formal objections must be accompanied by a statement of the facts upon which the objection is based. If substantial written objections are filed, a contested case hearing will be held by the Environmental Quality Council.

In accordance with Americans With Disabilities Act, special assistance or alternative formats will be made available upon request for individuals with disabilities.

NOTE TO PUBLISHER: This legal notice is provided to you as a requirement of the Wyoming DEQ/SHWD rules and regulations and must be published once per week for two (2) consecutive weeks. This legal notice should not be published unless specifically requested by the applicant identified above. If published, the applicant is solely responsible for all costs which are incurred.

PUBLIC NOTICE

In accordance with the provisions of the Wyoming Environmental Quality Act and Chapter 1, Section 1(f) of the Solid Waste Rules and Regulations, Anchor Environmental has submitted a SW Chapter 6 permit application for a new solid waste management facility called the Anchor Environmental Treatment, Transfer and Recycling Facility.

The facility is located in Natrona County just west of the City of Mills, Wyoming. More specifically, this facility is located in Section 2, T33N, R80W 6th PM, Natrona County, Wyoming. The facility provides for the transfer/treatment/recycling of used drilling fluid and sump wastes which have been generated within Wyoming, Colorado, Montana, Idaho, Nebraska, North Dakota and South Dakota. The total volumetric capacity of this facility is estimated to be approximately 84,000 gallons of liquid waste and 8,600 cubic yards of solids.

The Department of Environmental Quality, Solid and Hazardous Waste Division (DEQ) has reviewed the application and determined that it is generally complete and suitable for publication. The DEQ's solid waste rules, in Chapter 1, Section 2 (b)(ii), require that the applicant must provide public notice that a proposed permit has been issued and inform the public that there is an opportunity to file comments on the proposed permit before it is issued in final form. The notice is also required to indicate that the public may file formal written objections to issuance of a final permit. This publication provides notice of those opportunities.

Copies of the permit application, the DEQ's reviews of the application, and the proposed permit can be viewed at DEQ's Casper office (125 N. Durbin, Suite 100), at the Natrona County Public Library (307 East 2nd St, Casper, WY), or the Natrona County Clerk's Office (200 N. Center St, Casper, WY).

Any interested person has the right to either: provide comments on the proposed permit, which DEQ will consider prior to taking final action on the permit application, or file formal written objections to the proposed permit. The period for providing comments, or filing formal written objections to the proposed permit, shall begin on November 11, 2013 and end on December 18, 2013. Any comments or formal written objections must be received by 5:00 PM on the last day of the notice period. Comments or formal objections must be submitted in writing to the Department of Environmental Quality, Todd Parfitt, Director, 122 West 25th Street, Cheyenne, WY 82002. Formal objections must be accompanied by a statement of the facts upon which the objection is based. If substantial written objections are filed, a contested case hearing will be held by the Environmental Quality Council.

In accordance with Americans With Disabilities Act, special assistance or alternative formats will be made available upon request for individuals with disabilities.

PUBLIC NOTICE

In accordance with the provisions of the Wyoming Environmental Quality Act and Chapter 1, Section 1(f) of the Solid Waste Rules and Regulations, Anchor Environmental has submitted a SW Chapter 6 permit application for a new solid waste management facility called the Anchor Environmental Treatment, Transfer and Recycling Facility. The facility is located in Natrona County, just west of the City of Mills, Wyoming. More specifically, the facility is located in Section 2, T33N R00W 6th PM, Natrona County, Wyoming. The facility provides for the clean air treatment/recycling of used drilling fluid and sump wastes which have been generated within Wyoming, Colorado, Montana, Idaho, Nebraska, North Dakota and South Dakota. The total volumetric capacity of this facility is estimated to be approximately 84,000 gallons of liquid waste and 8,600 cubic yards of solids. The Department of Environmental Quality, Solid and Hazardous Waste Division (DEQ) has reviewed the application and determined that it is generally complete and suitable for publication. The DEQ's solid waste rules in Chapter 1, Section 2 (f)(1) require that the applicant must provide public notice that a proposed permit has been issued and inform the public that there is an opportunity to file comments on the proposed permit before it is issued in final form. The notice is

also required to indicate that the public may file formal written objections to the issuance of a final permit. This publication provides notice of these opportunities. Copies of the permit application, the DEQ's review of the application and the proposed permit can be viewed at DEQ's Casper office (425 N. Durbin, Suite 100) at the Natrona County Public Library (307 East 2nd St. Casper, WY) or the Natrona County Clerk's Office (200 N. 6th St. Casper, WY). Any interested person has the right to either provide comments on the proposed permit, which DEQ will consider prior to taking final action on the permit application, or file formal written objections to the proposed permit. The period for providing comments on the proposed permit shall begin on November 11, 2013, and end on November 19, 2013. Any comments or formal written objections must be received by 5:00 PM on the last day of the notice period. Comments or formal objections must be submitted in writing to the Department of Environmental Quality, Todd Paritt, Director, 122 West 25th Street, Cheyenne, WY 82002. Formal objections must be accompanied by a statement of the facts upon which the objection is based. All substantial written objections are filed a contested case hearing will be held by the Environmental Quality Council. In accordance with Americans with Disabilities Act, special assistance or alternative formats will be made available upon request for individuals with disabilities. Published November 11 & 19, 2013. Legal No. 97334B

PUBLIC NOTICE

In accordance with the provisions of the Wyoming Environmental Quality Act and Chapter 1, Section 6 of the Solid Waste Rules and Regulations, Anchor Environmental has submitted a SW Chapter 6 permit application for a new solid waste management facility called the Anchor Environmental Treatment, Transfer and Recycling Facility.

The facility is located in Natrona County just west of the City of Mills, Wyoming. More specifically, this facility is located in Section 2, T33N, R40W, 8th PM, Natrona County, Wyoming. The facility provides a site for the treatment/recycling of used drilling fluid and sump wastes which have been generated within Wyoming, Colorado, Montana, Idaho, Nebraska, North Dakota and South Dakota. The total volumetric capacity of this facility is estimated to be approximately 84,000 gallons of liquid waste and 6,000 cubic yards of solids.

The Department of Environmental Quality, Solid and Hazardous Waste Division (DEQ) has reviewed the application and determined that it is generally complete and suitable for publication. The DEQ's solid waste rules, in Chapter 1, Section 2 (b)(ii), require that the applicant must provide public notice that a proposed permit has been issued and inform the public that there is an opportunity to file comments on the proposed permit before it is issued in final form. The notice is

also required to indicate that the public may file formal written objections or issuance of a final permit. This public notice provides notice of those opportunities. Copies of the permit application, the DEQ's reviews of the application, and the proposed permit can be viewed at DEQ's Casper office (125 N. Durbin, Suite 100), at the Natrona County Public Library (307 East 2nd St., Casper, WY), or the Natrona County Clerk's Office (200 N. Carver St., Casper, WY).

Any interested person has the right to either provide comments on the proposed permit, which DEQ will consider prior to taking final action on the permit application, or file formal written objections to the proposed permit. The period for providing comments or filing formal written objections to the proposed permit, shall begin on November 11, 2013 and end on December 18, 2013. Any comments or formal written objections must be received by 5:00 PM on the last day of the notice period. Comments or formal objections must be submitted in writing to the Department of Environmental Quality, Todd Parrish, Director, 122 West 25th Street, Cheyenne, WY 82002. Formal objections must be accompanied by a statement of the facts upon which the objection is based. If substantial written objections are filed, a contested case hearing will be held by the Environmental Quality Council.

In accordance with Americans With Disabilities Act, special assistance or alternate formats will be made available upon request for individuals with disabilities.

To: Lisa Whetstone
Subject: attendance at county commissioners meeting

Lisa, please take this note as evidence that three people from the town of Mills council did indeed attend the meeting where we requested that the county commissioners would not forward a do pass on the anchor project.

Perhaps they will remember that I asked them not to operate as MY BIG BROTHER as I had enough of over management in my life by older siblings. We asked them not to consider this project in our growth area as we thought it would not be in the best interest for our potential growth. The county commissioners said that the P&Z had suggested a do pass but we had never been consulted about this matter prior to the meeting which we found out about by accident.

I informed Mr. Skovgard at our council meeting that such was the case when he said no one had objected to it prior to this time. I also mentioned that our former mayor had been in attendance and she spoke to the commissioners.

Their rationale was that they would pass it and leave it up to the environmental people to consider and deny this action. It should have been stopped here in Natrona County when we asked them to in 2013.

We are concerned about this whole project and although Mr. Skovgard has stated several times that he won't be handling unidentifiable chemical proponents the statement was made that it does include permit for "fracking" materials.

This is a major concern and should be left to those will have to deal with the fallout if it should go badly or be abandoned

This is signed for your records by:

Council member:

Ruth M. Pitts

RESOLUTION NO. 32-12
2012-0002

A RESOLUTION TO AMEND THE 2000 Zoning Resolution of Natrona County, Wyoming, Chapter X, Section 1, for a Zone Change from Urban Mixed Residential (UMR) zoning to Light Industrial (LI) zoning, affecting a 5.757 acre tract, located in a portion of the S/2 of the SE/4 of Section 2, Township 33 North, Range 80 West of the 6th Principal Meridian, Natrona County, Wyoming and being more particularly described by metes and bounds as follows:

Beginning at the northwest boundary of the SE/4 of the SE/4 of Section 2, thence N. 89° 53' E., 100 feet along the north boundary of the SW/4 of the SE/4 of Section 2 to the true point of beginning; thence S. 1° 00' E., 330 feet; thence S. 89° 53' W., 760 feet; thence N. 1° 00' W., 330 feet to a point on the north boundary of the SW/4 of the SE/4 of Section 2; thence N. 89° 53' E., 760 feet on the north boundary of the SW/4 of the SE/4 to the point of beginning; and

WHEREAS, the Natrona County Planning and Zoning Commission, pursuant to Section 18-5-202 (b) W.S. 1977, held a public hearing on May 8, 2012, due notice of which was provided, to consider the same and forwarded a failed recommendation to the Board of County Commissioners; and

WHEREAS, the Board of County Commissioners, pursuant to Section 18-5-202 (c), W.S. 1977, held a public hearing on June 5, 2012, due notice of which was provided, on this matter in compliance with the Wyoming State Statutes; and

WHEREAS, the zone change, in the opinion of the Board of County Commissioners, is in compliance with the 1998 Natrona County Development Plan and the Zoning Resolution of Natrona County, Wyoming, for the applicable section of Natrona County and does not adversely affect the public health, safety and general welfare of Natrona County. The Board of County Commissioners hereby makes the finding of facts as listed below in regards to this zone change:

- a) The owner of record has signed the application.
- b) No County services will be required for the zone change.
- c) The earlier residential zoning has given way to creation of a larger Light Industrial (LI) zoning district to the south and east of the area.
- d) The 1998 Natrona County Development Plan addresses the general Hanly/Zero Road area, recommending industrial infill, new commercial and new industrial; residential recognized as already non-conforming.

NOW, THEREFORE, be it resolved by the Board of County Commissioners, Natrona County, Wyoming, declares that Resolution No. 38-1A-80 Natrona County, Wyoming, is hereby amended as follows:

- 1) Change the zoning district classification being in the property described above from the Urban Mixed Residential (UMR) zoning district to the Light Industrial (LI) zoning district.
- 2) The official zoning map of Natrona County shall be changed to reflect this Resolution.

THIS AGREEMENT shall be binding upon and shall inure to the benefit of all parties hereto, their successors and assigns.
