

Tony Wyllie holds a B.S. in Wildlife Biology and Management (1997), from the University of Wyoming. He completed course and fieldwork towards a M.S. from the University of Wyoming during 1998-2000, studying mule deer winter range habitat and distribution near Pinedale, WY. He worked as a field technician on several projects for the Wyoming Cooperative Wildlife Research Unit, including a sage grouse habitat and nesting study, as well as, a small mammal habitat and population study near Rawlins, WY, a northern goshawk habitat study near Encampment, WY, a mule deer/elk interaction study near Baggs, WY and others. Tony has also completed numerous survey reports for BLM species of concern, including raptors, mountain plovers, sage and sharp-tailed grouse and others, within the Powder River Basin.
