

Brad Parry

I support Wyoming DEQ's efforts to develop new rules under Wyoming Air Quality Standards and Regulations in order to reduce harmful methane emissions from oil and gas operations.

Please let's stop making it so easy for a highly profitable industry to carelessly pollute by doing a subpar job of stewarding our land. Be clean about extraction or else make it so they can't operate at all. For the sake of all future generations we need to not be lazy about keeping the planet clean.
