Notes:  
 1. Samples were collected on December 5-6, 2006 by KC Harvey, Inc. using a Giddings Probe. Samples were analyzed by Energy Laboratories, Inc., Helena, Montana.  
 2. pH, EC, calcium, magnesium, and sodium, analytes were conducted using a subsaturated paste extract. Abbreviations used are as follows: A.S. = standard units, dS/m = decisiemens per meter, meq/L = milliequivalents per liter, meq/100 g = milliequivalents per 100 grams of soil, and % = percent.  
 3. Average EC and ESP to a depth of 48 inches was calculated by averaging the 0 to 6 and 6 to 12 inch depths to derive a 0 to 12 inch value, then averaging together each 12 inch depth increment to a depth of 48 inches.

Notes:

1 Abbreviations used are as follows: s.u. = standard units, dS/m = deciSiemens per meter, mg/L = milligrams per liter, µg/L = micrograms per liter, and, nd = analyte not detected at the given reporting limit. \*-\* indicates the sample was not analyzed for a given parameter. Samples were analyzed by Energy Laboratories, Inc, Gillette, WY.

2 Livestock watering criteria are from WYDEQ (2006) and National Academy of Sciences (1972 and 1974).

3 Outfall WY0049352-001 was sampled on 7/21/2006, Outfall WY49352-002 was sampled on two occasions, 7/21/2006 and 9/05/2006, average values are listed. All samples were collected by Yates.

4 Outfall WY0046612 is located in the NESE of Section 28 in Township 42 N, Range 75 W. The sample was collected on 9/21/2004 by Devon.

5 Outfall WY0046612 is located in the NESE of Section 28 in Township 42 N, Range 75 W. The sample was collected on 4/17/2006 by Devon.

6 The median pH value is reported.

7 Arsenic and selenium are quantified as total recoverable metals, and, boron, cadmium, chromium, copper, lead, mercury, and zinc are quantified as dissolved metals.
